## **CSA Staff Notice 95-301** Margin and Collateral Requirements for Non-Centrally Cleared **Derivatives**

#### August 22, 2019

#### Introduction

This notice provides an update on work being done by the Canadian Securities Administrators (CSA or we) on the implementation of margin and collateral requirements relating to over-thecounter derivatives that are not centrally cleared.

#### **Background**

Subsequent to the 2008 financial crisis, the G20 leaders agreed on reforms to the way that OTC derivatives are regulated. One element of these reforms, agreed to at the Cannes Summit held in November 2011, was the development of mandatory margin and collateral requirements for noncentrally cleared derivatives. In response to this decision, the Basel Committee on Banking Supervision and the Board of the International Organization of Securities Commissions formed a working group (the WGMR) to develop minimum standards which were published in September, 2013. A revised version of the WGMR's standards was published in March 2015.

The WGMR's standards provide a timeline for phasing in the margin and collateral requirements. Under the timeline requirements, the largest covered entities, those with an aggregate month-end notional amount of non-centrally cleared derivatives in excess of a €3 trillion threshold, were phased in from September 1, 2016. The requirement was then implemented, in stages, over several years for the covered entities with progressively smaller thresholds. WGMR proposes that covered entities with an aggregate month-end notional amount of non-centrally cleared derivatives in excess of an €8 billion threshold will be phased in from September 1, 2021<sup>1</sup>.

In response to the WGMR's standards, on July 7, 2016, the CSA published CSA Consultation Paper 95-401 – Margin and Collateral Requirements for Non-Centrally Cleared Derivatives for the purpose of soliciting public comment on policy recommendations about proposed minimum margin and collateral requirements for non-centrally cleared derivatives that are consistent with the WGMR's standards.

In June 2017, the Office of the Superintendent of Financial Institutions (OSFI) published Guideline E-22 - Margin Requirements for Non-Centrally Cleared Derivatives. This guideline

<sup>&</sup>lt;sup>1</sup> The International Organization of Securities Commissions (IOSCO) and the Basel Committee on Banking Supervision (BCBS) published an updated version of the policy framework for margin requirements for non-centrally cleared derivatives that extended the implementation period on July 23, 2019. See the updated framework at https://www.iosco.org/library/pubdocs/pdf/IOSCOPD635.pdf.

applies to federally regulated financial institutions.<sup>2</sup>

In recent months representatives of key global market participants published documents that raise issues relating to the implementation of margin requirements for non-centrally cleared derivatives.<sup>3</sup>

# Plan for Implementation of Margin and Collateral Requirements for Non-centrally Cleared Derivatives

The CSA has decided that it will delay the implementation of mandatory margin and collateral requirements for non-centrally cleared derivatives.

After completing a review of derivatives trade data, the CSA does not believe that such a delay will result in increased systemic risk to Canadian financial markets or participants. The CSA will implement a harmonized process to monitor Canada's derivatives markets and the positions of participants. We will also monitor international developments. The monitoring will inform our decisions as to the implementation of margin and collateral requirements for non-centrally cleared derivatives.
