APPENDIX A to Companion Policy 96-101 *Trade Repositories and Derivatives Data Reporting* –
Multilateral Derivatives Data Technical Manual

PART 1 GENERAL COMMENTS

Introduction

This companion policy (the “Policy”) provides guidance on how those members (“participating jurisdictions” or “we”) of the Canadian Securities Administrators participating in Multilateral Instrument 96-101 *Trade Repositories and Derivatives Data Reporting* (the “Instrument”) interpret various matters in the Instrument.

Except for Part 1, the numbering and headings of Parts, sections and subsections in this Policy correspond to the numbering and headings in the Instrument. Any general guidance for a Part or section appears immediately after the Part or section name. Any specific guidance on a section or subsection follows any general guidance. If there is no guidance for a Part or section, the numbering in this Policy will skip to the next provision that does have guidance.

Unless defined in the Instrument or this Policy, terms used in the Instrument and in this Policy have the meaning given to them in securities legislation, including in National Instrument 14-101 *Definitions*.

Definitions and interpretation of terms in this Policy and in the Instrument

1. (1) In this Policy

“cleared derivative” means a derivative that is created under the rules of a reporting clearing agency and to which the reporting clearing agency is a counterparty, including any derivative resulting from a novation of an original derivative upon acceptance of such original derivative for clearing;

“CPMI” means the Committee on Payments and Market Infrastructures;¹

“derivatives party”² means, in relation to a derivatives dealer, either of the following:

- (a) a person or company for which the derivatives dealer acts or proposes to act as an agent in relation to a transaction;
- (b) a person or company that is, or is proposed to be, a party to a derivative if the derivatives dealer is the counterparty;

“FMI” means a financial market infrastructure, as described in the PFMI Report;

“IOSCO” means the Technical Committee of the International Organization of Securities Commissions;

¹ Prior to September 1, 2014, CPMI was known as the Committee on Payment and Settlement Systems (CPSS).

² The term “derivatives party” is similar to the concept of a “client” in National Instrument 31-103 *Registration Requirements, Exemptions and Ongoing Registration Obligations (NI 31-103)*. We have used the term “derivatives party” instead of “client” to reflect the circumstance where a derivatives dealer may not regard its counterparty as its “client.”

“ISDA methodology” means the methodology described in the Canadian Transaction Reporting Party Requirements issued by the International Swaps and Derivatives Association, Inc. and dated April 4, 2014;

“LEI” means a legal entity identifier;

“LEI ROC” means the Legal Entity Identifier System Regulatory Oversight Committee;

“original derivative” means the original bilateral derivative between two counterparties that has been, or is intended to be, accepted for clearing by a reporting clearing agency;

“PFMI Report” means the April 2012 final report entitled *Principles for financial market infrastructures* published by CPMI (formerly CPSS) and IOSCO, as amended from time to time;³

“principle” means, unless the context otherwise indicates, a principle set out in the PFMI Report;

“uncleared derivative” means a derivative that is not a cleared derivative, and includes both (i) an original derivative, and (ii) a derivative that is not intended to be cleared (for example, under the terms of an ISDA Master Agreement);

“UPI” means a unique product identifier;

“UTI” means a unique transaction identifier.

(2) The definition of “asset class” in the Instrument is not exclusive. Some types of derivatives may fall into more than one asset class.

(3) The definitions of “collateral and margin data” and “creation data” refer to data elements listed in Appendix A to the Instrument. The Multilateral Derivatives Data Technical Manual, attached as Appendix A to this Policy, provides additional guidance relating to the data elements listed in Appendix A of the Instrument that will clarify the technical aspects of data that should be included in “collateral and margin data” and “creation data”.

(4) A person or company that meets the definition of “derivatives dealer” in a local jurisdiction is subject to the Instrument, whether or not it is registered or exempted from the requirement to be registered in that jurisdiction.

A person or company will be subject to the obligations of a derivatives dealer under the Instrument if it is either of the following:

- in the business of trading derivatives;
- otherwise required to register as a derivatives dealer under securities legislation.

³ The PFMI Report is available on the Bank for International Settlements’ website (www.bis.org) and the IOSCO website (www.iosco.org).

We consider the factors listed below to be relevant (but not exhaustive) in determining whether a person or company is a derivatives dealer for the purpose of the Instrument:

- *Acting as a market maker* – Market making is generally understood as the practice of routinely standing ready to transact derivatives by
 - responding to requests for quotes on derivatives, or
 - making quotes available to other persons or companies that seek to transact derivatives, whether to hedge a risk or to speculate on changes in the market value of the derivative.

Market makers are typically compensated for providing liquidity through spreads, fees or other compensation, including fees or compensation paid by an exchange or a trading facility that do not relate to the change in the market value of the derivative transacted. A person or company that contacts another person or company about a transaction to accommodate its own risk management needs or to speculate on the market value of a derivative will not, typically, be considered to be acting as a market maker.

A person or company will be considered to be “routinely standing ready” to transact derivatives if it is responding to requests for quotes or it is making quotes available with some frequency, even if it is not on a continuous basis. Persons or companies that respond to requests or make quotes available occasionally are not “routinely standing ready”.

A person or company would also typically be considered to be a market maker when it holds itself out as undertaking the activities of a market maker.

Engaging in bilateral discussions relating to the terms of a transaction will not, on its own, constitute market making activity.

- *Directly or indirectly carrying on the activity with repetition, regularity or continuity* – Frequent or regular transactions are a common indicator that a person or company may be engaged in trading-for a business purpose. The activity does not have to be its sole or even primary endeavour for it to be in the business. We consider regularly trading in any way that produces, or is intended to produce, profits to be for a business purpose.
- *Facilitating or intermediating transactions* – The person or company provides services relating to the facilitation of trading or intermediation of transactions between third-party counterparties to derivatives contracts.
- *Transacting with the intention of being compensated* – The person or company receives, or expects to receive, any form of compensation for carrying on transaction activity. This would include any compensation that is transaction or value-based including compensation from spreads or built-in fees. It does not matter if the person or company actually receives compensation or what form the compensation takes. However, a person or company would not be considered to be a derivatives dealer solely by reason that it realizes a profit from changes in the market price for the derivative (or its underlying reference asset), regardless of whether the derivative is intended for the purpose of hedging or speculating.

- *Directly or indirectly soliciting in relation to transactions* – The person or company directly solicits transactions. Solicitation includes contacting someone by any means, including communication that offers (i) transactions, (ii) participation in transactions or (iii) services relating to transactions. This would include providing quotes to derivatives parties or potential derivatives parties that are not provided in response to a request. This also includes advertising on the internet with the intention of encouraging transacting in derivatives by local persons or companies. A person or company might not be considered to be soliciting solely because it contacts a potential counterparty, or a potential counterparty contacts them to enquire about a transaction, unless it is the person or company's intention or expectation to be compensated as a result of the contact. For example, a person or company that wishes to hedge a specific risk is not necessarily soliciting for the purpose of the Instrument if it contacts multiple potential counterparties to enquire about potential transactions to hedge the risk.
- *Engaging in activities similar to a derivatives dealer* – The person or company carries out any activities related to transactions involving derivatives that would reasonably appear, to a third party, to be similar to the activities discussed above. This would not include the operator of an exchange or a clearing agency.
- *Providing derivatives clearing services* – The person or company provides services to allow third parties, including counterparties to transactions involving the person or company, to clear derivatives through a clearing agency. These services are actions in furtherance of a trade conducted by a person or company that would typically play the role of an intermediary in the derivatives market.

In determining whether or not they are a derivatives dealer for purposes of the Instrument, a person or company should consider their activities holistically. We do not consider that all of the factors discussed above necessarily carry the same weight or that any one factor will be determinative.

Generally, we would consider a person or company that engages in the activities referenced above in an organized and repetitive manner to be a derivatives dealer. Ad hoc or isolated activities may not necessarily result in a person or company being a derivatives dealer. For example if a person or company has the intention to take a long and short position at the same time to manage business risk, it does not necessarily mean that the person or company is making a market. Similarly, organized and repetitive proprietary trading, in and of itself, absent other factors described above, may not result in a person or company being a derivatives dealer for the purpose of the Instrument.

To be a derivatives dealer in a jurisdiction, a person or company must conduct the activities described above in that jurisdiction. Activities are considered to be conducted in a jurisdiction, if the derivatives party is a local counterparty in the jurisdiction. A person or company does not need to have a physical location, staff or other presence in the local jurisdiction to be a derivatives dealer. This would include a person or company located in a foreign jurisdiction that conducts dealing activities with a derivatives party located in the local jurisdiction.

In other words, where dealing activities are provided to derivatives parties in a local jurisdiction or where dealing activities are otherwise conducted within the local jurisdiction, regardless of the location of the derivatives party, we would generally consider a person or company to be a derivatives dealer.

A person or company's primary business activity does not need to include the activities described above for the person or company to be a derivatives dealer for the purpose of the Instrument. Its primary business activity could be unrelated to any of the factors described above; however, if it does meet any of these factors, it may be a derivatives dealer in the jurisdiction in which it engages in those activities.

A person or company is not a derivatives dealer for the purpose of the Instrument, if they would be a dealer solely as a result of derivatives involving affiliated entities.

(5) A "lifecycle event" is defined in the Instrument as an event that results in a change to derivatives data previously reported to a recognized trade repository. Examples of a lifecycle event include:

- a change to the termination date for the derivative;
- a change in the cash flows, payment frequency, currency, numbering convention, spread, benchmark, reference entity or rates originally reported;
- the availability of an LEI for a counterparty previously identified by name or by some other identifier;
- a corporate action affecting a security or securities on which the derivative is based (e.g., a merger, dividend, stock split, or bankruptcy);
- a change to the notional amount of a derivative, including contractually agreed-upon changes (e.g., amortization schedule);
- the exercise of a right or option that is an element of the derivative;
- the satisfaction of a level, event, barrier or other condition contained in the derivative.

When reporting a lifecycle event, there is no obligation to re-report derivatives data that has not changed; only new data and changes to previously reported data need to be reported.

(6) The definition of "local counterparty" includes a number of factors that are different from the addresses under a counterparty's LEI. As a result, using the address information in a counterparty's LEI is not an acceptable substitute for determining whether the counterparty is a local counterparty in a jurisdiction.

For purposes of the requirements under the Instrument applicable to a local counterparty, paragraph (a) of the definition of “local counterparty” does not include an individual resident in the local jurisdiction. However, reporting counterparties are required to report derivatives involving such individuals and to identify the “country and province of individual” in data element #9 specified in Appendix A to the Instrument, whether or not such individuals have an LEI.

(7) We use the term “transaction” in the Instrument instead of the statutorily defined term “trade”. The term “transaction” reflects that certain types of activities or events relating to a derivative, whether or not they constitute a “trade”, must be reported as a unique derivative. The primary differences between the two definitions are that (i) the term “trade” as defined in securities legislation includes material amendments and terminations, whereas “transaction” as defined in the Instrument does not, and (ii) the term “transaction” as defined in the Instrument includes a novation to a clearing agency, whereas “trade” as defined in securities legislation does not.

A material amendment to a derivative is not a “transaction” and is required to be reported as a lifecycle event under section 32. Similarly, a termination is not a “transaction”, as the expiry or termination of a derivative is required to be reported as a lifecycle event under section 32.

In addition, the definition of “transaction” in the Instrument includes a novation to a clearing agency. The creation data resulting from a novation of a bilateral derivative to a clearing agency is required to be reported as a distinct derivative with reporting links to the original derivative.

PART 2

TRADE REPOSITORY RECOGNITION AND ONGOING REQUIREMENTS

Part 2 sets out rules relating to the recognition of a trade repository by the local securities regulatory authority and establishes ongoing requirements for a recognized trade repository. To obtain and maintain recognition as a trade repository, a person or company must comply with these requirements and the terms and conditions in the recognition order made by the securities regulatory authority.

In order to comply with the reporting obligations contained in Part 3, a reporting counterparty to a derivative involving a local counterparty must report the derivative to a recognized trade repository. In some jurisdictions, securities legislation prohibits a person or company from carrying on business as a trade repository in the jurisdiction unless recognized as a trade repository by the securities regulatory authority.

The legal entity that applies to be a recognized trade repository will typically be the entity that operates the facility and collects and maintains records of derivatives data reported to the trade repository by other persons or companies. In some cases, the applicant may operate more than one trade repository. In such cases, the applicant may file separate forms in respect of each trade repository, or it may choose to file one form to cover all of its different trade repositories. If the latter alternative is chosen, the applicant must clearly identify the facility to which the information or any changes submitted under this Part of the Instrument apply.

Filing of initial information on application for recognition as a trade repository

2. In determining whether to recognize an applicant as a trade repository under securities legislation, we will consider a number of factors, including the following:

- whether it is in the public interest to recognize the trade repository;
- the manner in which the trade repository proposes to comply with the Instrument;
- whether the trade repository has meaningful representation as described in subsection 9(2) on its board of directors;
- whether the trade repository has sufficient financial and operational resources for the proper performance of its functions;
- whether the rules and procedures of the trade repository are reasonably designed to ensure that its business is conducted in an orderly manner that fosters both fair and efficient capital markets, and improves transparency in the derivatives market;
- whether the trade repository has policies and procedures to effectively identify and manage conflicts of interest arising from its operation and the services it provides;
- whether the requirements of the trade repository relating to access to its services are fair and reasonable;
- whether the trade repository's process for setting fees is fair, transparent and appropriate;
- whether the trade repository's fees are inequitably allocated among the participants, have the effect of creating barriers to access, or place an undue burden on any participant or class of participants;
- the manner and process for the securities regulatory authority and other applicable regulatory agencies to receive or access derivatives data, including the timing, type of reports, and any confidentiality restrictions;
- whether the trade repository has robust and comprehensive policies, procedures, processes and systems reasonably designed to ensure the security and confidentiality of derivatives data;
- for trade repositories that are not resident in the local jurisdiction, whether the securities regulatory authority has entered into a memorandum of understanding with the relevant regulatory authority in the trade repository's local jurisdiction;
- whether the trade repository has been, or will be, in compliance with securities legislation, including compliance with the Instrument and any terms and conditions attached to the recognition order in respect of the trade repository.

A trade repository that is applying for recognition must demonstrate that it has established, implemented, maintained and enforced appropriate written rules, policies and procedures that are in accordance with standards applicable to trade repositories. In assessing these rules, policies and procedures, we will consider, among other things, the principles, key considerations and explanatory notes applicable to trade repositories in the PFMI Report. The applicable principles, which have been incorporated into the Instrument and the interpretation of which should be consistent with the PFMI Report, are set out in the following chart, along with the corresponding sections of the Instrument.

Principle in the PFMI Report applicable to a trade repository	Relevant section(s) of the Instrument
Principle 1: Legal basis	Section 7 – Legal framework Section 17 – Rules, policies, and procedures (in part)
Principle 2: Governance	Section 8 – Governance Section 9 – Board of directors Section 10 – Management
Principle 3: Framework for the comprehensive management of risks	Section 19 – Comprehensive risk-management framework Section 20 – General business risk (in part)
Principle 15: General business risk	Section 20 – General business risk
Principle 17: Operational risk	Section 21 – System and other operational risks requirements Section 22 – Data security and confidentiality Section 24 – Outsourcing
Principle 18: Access and participation requirements	Section 13 – Access to recognized trade repository services Section 16 – Due process (in part) Section 17 – Rules, policies and procedures (in part)
Principle 19: Tiered participation arrangements	Section 7 – Legal framework Section 24.1 – Link and tiered participation arrangements
Principle 20: FMI links	Section 7 – Legal framework Section 24.1 – Link and tiered participation arrangements

Principle 21: Efficiency and effectiveness	Section 8 – Governance Section 12 – Fees Section 14.1 – Operational efficiency and effectiveness
Principle 22: Communication procedures and standards	Section 15 – Communication policies, procedures and standards
Principle 23: Disclosure of rules, key procedures, and market data	Section 17 – Rules, policies and procedures (in part)
Principle 24: Disclosure of market data by trade repositories	Sections in Part 4 – Data Dissemination and Access to Data

We anticipate that the regulator in each local jurisdiction will consider the principles in conducting its oversight activities of a recognized trade repository. Similarly, we expect that a recognized trade repository will observe the principles in complying with the Instrument and the terms of its recognition order.

Information included in the forms filed by an applicant or recognized trade repository under the Instrument will be kept confidential to the extent permitted in the securities legislation of the local jurisdiction, where this content contains proprietary financial, commercial and technical information. We are of the view that the cost and potential risks to the filers of disclosure of such information may outweigh the benefit of the principle requiring that forms be made available for public inspection. However, we would expect a recognized trade repository to disclose its responses to the CPMI-IOSCO consultative report entitled *Disclosure framework for financial market infrastructures*,⁴ which is a supplement to the PFMI Report. Other information included in the filed forms will be required to be made publicly available by a recognized trade repository in accordance with the Instrument or the terms and conditions of the recognition order imposed by a securities regulatory authority.

Although we will generally keep confidential the information contained in a filed Form 96-101F1 *Application for Recognition – Trade Repository Information Statement* and any amendments to such information, if a regulator or securities regulatory authority considers that it is in the public interest to do so, it may require the applicant or recognized trade repository to disclose a summary of the information contained in the form or in any amendments thereto.

Notwithstanding the confidential nature of the forms, each application (excluding forms) will be published for comment for a minimum period of 30 days.

(2) A person or company applying for recognition as a trade repository whose head office or principal place of business is located in a foreign jurisdiction will typically be required to provide additional information to allow us to evaluate a trade repository’s application, including

⁴ Publication available on the BIS website (www.bis.org) and the IOSCO website (www.iosco.org).

- an undertaking to provide the regulator or securities regulatory authority with access to its books and records and to submit to onsite inspection and examination by the regulator or securities regulatory authority, and
- an opinion of legal counsel addressed to the regulator or securities regulatory authority that the person or company has the power and authority to provide the regulator or securities regulatory authority with access to the person or company's books and records, and to submit to onsite inspection and examination by the regulator or securities regulatory authority.

Change in information by a recognized trade repository

3. A participating jurisdiction with which an amendment to the information provided in Form 96-101F1 *Application for Recognition – Trade Repository Information Statement* is filed will endeavour to review such amendment in accordance with subsections 3(1) and 3(2) before the proposed implementation date for the change. However, where the changes are complex, raise regulatory concerns, or when additional information is required, this review may exceed these timeframes.

(1) We would consider a change to be significant when it could impact a recognized trade repository, its users, participants, market participants, investors, or the capital markets (including derivatives markets and the markets for assets underlying a derivative). We would generally consider a significant change to include, but not be limited to, the following:

- a change in the structure of the recognized trade repository, including procedures governing how derivatives data is collected and maintained (including in any back-up sites), that has or may have a direct impact on users in a local jurisdiction;
- a change to the services provided by the recognized trade repository, or a change that affects the services provided, including the hours of operation, that has or may have a direct impact on users in a local jurisdiction;
- a change to means of access to the recognized trade repository's facility and its services, including changes to data formats or protocols, that has or may have a direct impact on users in a local jurisdiction;
- a change to the types of derivative asset classes or categories of derivatives that may be reported to the recognized trade repository;
- a change to the systems and technology used by the recognized trade repository that collect, maintain and disseminate derivatives data, including matters affecting capacity;
- a change to the governance of the recognized trade repository, including material changes to the structure of its board of directors or board committees and their related mandates;
- a change in control of the recognized trade repository;

- a change in entities that provide key services or systems to, or on behalf of, the recognized trade repository;
- a change to outsourcing arrangements for key services or systems of the recognized trade repository;
- a change to fees or the fee structure of the recognized trade repository;
- a change in the recognized trade repository's policies and procedures relating to risk-management, including relating to business continuity and data security, that has or may have an impact on the recognized trade repository's provision of services to its participants;
- the commencement of a new type of business activity, either directly or indirectly through an affiliated entity;
- a change in the location of the recognized trade repository's head office or primary place of business or the location where the main data servers or contingency sites are housed.

(2) We will generally consider a change in a recognized trade repository's fees or fee structure to be a significant change. However, we acknowledge that recognized trade repositories may frequently change their fees or fee structure and may need to implement fee changes within timeframes that are shorter than the 45-day notice period contemplated in subsection 3(1). To facilitate this process, subsection 3(2) provides that a recognized trade repository may provide information that describes the change to fees or fee structure in a shorter timeframe (at least 15 days before the expected implementation date of the change to fees or fee structure) than is provided for another type of significant change. See section 12 of this Policy for guidance with respect to fee requirements applicable to recognized trade repositories.

(3) Subsection 3(3) sets out the filing requirements for changes to information provided in a filed Form 96-101F1 *Application for Recognition – Trade Repository Information Statement* other than those described in subsections 3(1) or (2). Such changes to information are not considered significant and include the following:

- changes that would not have an impact on the recognized trade repository's structure or participants, or more broadly on market participants, investors or the capital markets;
- changes in the routine processes, policies, practices, or administration of the recognized trade repository that would not impact participants;
- changes due to standardization of terminology;
- changes to the types of participants of a recognized trade repository that are in a local jurisdiction;

- necessary changes to conform to applicable regulatory or other legal requirements of a jurisdiction of Canada;
- minor system or technology changes that would not significantly impact the system or its capacity.

The participating jurisdictions may review filings under subsection 3(3) to ascertain whether the changes have been categorized appropriately. If the securities regulatory authority disagrees with the categorization, the recognized trade repository will be notified in writing. Where the securities regulatory authority determines that changes reported under subsection 3(3) are in fact significant changes under subsection 3(1), the recognized trade repository will be required to file an amendment to Form 96-101F1 that will be subject to review by the securities regulatory authority.

Ceasing to carry on business

6. (1) In addition to filing a completed Form 96-101F3 *Cessation of Operations Report for Recognized Trade Repository*, a recognized trade repository that intends to cease carrying on business in the local jurisdiction as a recognized trade repository must make an application to voluntarily surrender its recognition to the securities regulatory authority pursuant to securities legislation. The securities regulatory authority may accept the voluntary surrender subject to terms and conditions.⁵

Legal framework

7. (1) We would generally expect a recognized trade repository to have rules, policies, and procedures in place that provide a legal basis for their activities in all relevant jurisdictions where they have activities, whether within Canada or any foreign jurisdiction.

Recognized trade repositories must establish, implement and maintain written rules, policies and procedures that are not contrary to the public interest and that are reasonably designed to ensure that all contractual and link arrangements comply with applicable securities laws. We expect the recognized trade repository to take steps to ensure compliance with all rules, policies and procedures

(1)(b.3) Recognized trade repositories will need to measure and manage material risks that could arise from any indirect participant arrangements. For example, it is necessary to identify an indirect participant's transaction volumes or values that are large relative to those of a smaller participant through which they access their services in order to manage the material risks arising from such an arrangement.

⁵ This will apply in those jurisdictions where securities legislation provides the securities regulatory authority with the power to impose terms and conditions on an application for voluntary surrender. The transfer of derivatives data/information can be addressed through the terms and conditions imposed by the securities regulatory authority on such application.

Governance

8. (1) The board of directors of a recognized trade repository must establish a well-defined, clear and transparent risk management framework. The governance arrangements established by the board should ensure that the risk management and internal control functions have sufficient authority, independence, resources and access to the board. We expect all internal controls to be effective in carrying out their purpose.

(3) We expect that interested parties will be able to locate the governance information required by subsections 8(1) and 8(2) through a web search or through clearly identified links on the recognized trade repository's website.

Board of directors

9. The board of directors of a recognized trade repository is subject to various requirements, such as requirements pertaining to board composition and conflicts of interest. To the extent that a recognized trade repository is not organized as a corporation, the requirements relating to the board of directors may be fulfilled by a body that performs functions that are equivalent to the functions of a board of directors.

(2) Paragraph 9(2)(a) requires individuals who comprise the board of directors of a recognized trade repository to have an appropriate level of skill and experience to effectively oversee the management of its operations. This would include individuals with experience and skills in areas such as business recovery, contingency planning, financial market systems and data management.

Under paragraph 9(2)(b), the board of directors of a recognized trade repository must include individuals who are independent of the recognized trade repository. We generally consider individuals who have no direct or indirect material relationship with the recognized trade repository as independent. We expect that independent directors of a recognized trade repository would represent the public interest by ensuring that regulatory and public transparency objectives are fulfilled, and that the interests of participants who are not derivatives dealers are considered.

(3) and (4) Under subsections 9(3) and 9(4), it is expected that the recognized trade repository will clarify in its governance arrangements the roles and responsibilities of its board of directors, including procedures for its functioning. We expect such procedures to, among other things, identify, address and manage board member conflicts of interest. The board should also review its overall performance and the performance of individual board members regularly.

Chief compliance officer

11. (1) Subsection 11(1) is not intended to prevent management from hiring the chief compliance officer, but instead requires the board to approve the appointment.

(4) References to harm to the capital markets in subsection 11(3) may be in relation to domestic or international capital markets.

Fees

12. We would generally expect a recognized trade repository's fees and charges to be fairly and equitably allocated among participants. We anticipate that the relevant securities regulatory authority will consider fees when assessing an application for recognition by a trade repository and may review changes in fees proposed by recognized trade repositories. In analyzing fees, we anticipate considering a number of factors, including the following:

- the number and complexity of the derivatives being reported;
- the amount of the fee or charge imposed relative to the cost of providing the services;
- the amount of fees or charges imposed by other comparable trade repositories, where relevant, to report similar derivatives in the market;
- with respect to market data fees and charges, the amount of market data fees charged relative to the market share of the recognized trade repository;
- whether the fees or charges represent a barrier to accessing the services of the recognized trade repository for any category of participant.

A recognized trade repository should provide clear descriptions of priced services for comparability purposes. Other than fees for individual services, a recognized trade repository should also disclose charges and other fees related to connecting to or accessing the trade repository. For example, a recognized trade repository should disclose information on the system design, as well as technology and communication procedures, that influence the fees for using the recognized trade repository. A recognized trade repository is also expected to provide timely notice to participants and the public of any changes to services and fees.

A recognized trade repository should regularly review the structure of its fees and other charges to customers, including any indirect charges, to ensure efficiency and effectiveness of service.

Access to recognized trade repository services

13. (1) The criteria for participation established by a recognized trade repository should not limit access to its services, except in limited circumstances where the recognized trade repository has a reasonable belief that such access would result in risks to the trade repository, its technology systems or the accuracy or integrity of the data it provides to the securities regulators or to the public. In addition, such criteria could restrict access to a person that has failed to pay the recognized trade repository's fees, in whole or in part, that have been set in accordance with section 12 of the Instrument.

(3) Under subsection 13(3), a recognized trade repository is prohibited from unreasonably preventing, conditioning or limiting access to its services, unreasonably discriminating between its participants, imposing unreasonable barriers to competition or requiring the use or purchase of another service in order for a person or company to utilize its trade reporting service. A recognized trade repository should not engage in anti-competitive practices such as setting overly restrictive terms of use or engaging in anti-competitive price discrimination. A recognized trade repository should not develop closed, proprietary interfaces that result in vendor lock-in or barriers to entry with respect to competing service providers that rely on the data maintained by the recognized trade repository. As an example, a recognized trade repository that is affiliated with a clearing agency must not impose barriers that would make it difficult for a competing clearing agency to report derivatives data to the recognized trade repository.

Acceptance of reporting

14. Section 14 requires that a recognized trade repository accept derivatives data for all derivatives of the asset class or classes set out in its recognition order. For example, if the recognition order of a recognized trade repository includes interest rate derivatives, the recognized trade repository is required to accept derivatives data for all types of interest rate derivatives that are entered into by a local counterparty. It is possible that a recognized trade repository may accept derivatives data for only a subset of a class of derivatives if this is indicated in its recognition order. For example, there may be recognized trade repositories that accept derivatives data for only certain types of commodity derivatives, such as energy derivatives.

(2) The requirement to accept corrections to errors or omissions in derivatives data continues to apply after the expiration or termination of a derivative, subject to the record retention period under section 18. We consider this requirement to be limited to errors or omissions received from participants that are counterparties, their agents or third party service providers.

In evaluating what will be considered to be “technologically practicable” for purposes of subsection 14(2), we will take into account the prevalence, implementation and use of technology by comparable trade repositories. We may also conduct independent reviews to determine the state of technology.

(3) Recognized trade repositories must accept derivatives data that conforms to the data elements in Appendix A to the Instrument. In addition, we expect a recognized trade repository to accept derivatives data that complies with the technical specifications set out in the Multilateral Derivatives Data Technical Manual, which is included as Appendix A to this Policy.

Operational efficiency and effectiveness

14.1. Section 14.1 requires that a recognized trade repository establish policies and procedures to review its provision of derivatives reporting services to ensure provision in a secure, efficient and effective manner. This review should include, but not be limited to, the design of its operating structure (including connections with trading venues or platforms, or service providers), the scope of products that are reportable, and the use of technology and procedures. We also expect a recognized trade repository to design its services to meet the needs of the participants and markets it serves.

A recognized trade repository should also have policies and procedures in place to review on a regular basis its pricing structure, charges and operational reliability. A recognized trade repository should have policies and procedures that specify measurable and achievable goals and objectives in reference to its business operations and risk management priorities.

Communication policies, procedures and standards

15. Section 15 sets out the communication standards required to be used by a recognized trade repository in communications with other specified entities. The reference in paragraph 15(d) to “service providers” may include persons or companies who offer technological or transaction processing or post-transaction services.

Due process

16. Section 16 imposes a requirement that a recognized trade repository provide participants or applicants with an opportunity to be heard before making a decision that directly and adversely affects the participant or applicant. We would generally expect that a recognized trade repository would meet this requirement by conducting a hearing or by allowing the participant or applicant to make representations in any form.

Rules, policies and procedures

17. The rules, policies and procedures of a recognized trade repository should be clear and comprehensive, and include explanatory material written in plain language so that participants can fully understand the system’s design and operations, their rights and obligations, and the risks of participating in the system. Moreover, a recognized trade repository should disclose, to its participants and to the public, basic operational information and responses to the *FMI disclosure template* in Annex A of the CPMI-IOSCO report *Principles for financial market infrastructures: Disclosure framework and assessment methodology*, published December 2012.

We anticipate that participating jurisdictions may develop and implement a protocol with the recognized trade repository that will set out the procedures to be followed with respect to the review and approval of rules, policies and procedures and any amendments thereto. Such a protocol may be appended to and form part of the recognition order. Depending on the nature of the changes to the recognized trade repository’s rules, policies and procedures, such changes may also impact the information contained in Form 96-101F1 *Application for Recognition – Trade Repository Information Statement*. In such cases, the recognized trade repository will be required to file an amendment to Form 96-101F1 with the securities regulatory authority. See section 3 of this Policy for a discussion of filing requirements. We anticipate that requirements relating to the review and approval of rules, policies, and procedures and any amendments thereto will be described in the order of the securities regulatory authority recognizing the trade repository.

(3) Subsection 17(3) requires that a recognized trade repository monitor compliance with its rules, policies and procedures. The methodology of monitoring such compliance should be fully documented.

(4) The processes implemented by a recognized trade repository for dealing with a participant's non-compliance with its rules, policies and procedures do not preclude enforcement action by any other person or company, including a securities regulatory authority or other regulatory body.

Records of data reported

18. A recognized trade repository may be subject to record-keeping requirements under securities legislation that are in addition to those under section 18 of the Instrument.

(2) The requirement to maintain records for 7 years after the expiration or termination of a derivative, rather than from the date of the transaction, reflects the fact that derivatives create ongoing obligations and that information is subject to change throughout the life of a derivative. A correction to data after expiration or termination of the derivative, as required under section 14, does not alter the record retention period.

We expect a recognized trade repository to maintain records relating to errors or omissions in derivatives data, including corrections to derivatives data that has previously been disseminated under Part 4. In addition, we expect a recognized trade repository to maintain records relating to derivatives data that does not satisfy the validation procedures of the recognized trade repository, including, but not limited to, validation errors, messages and timestamps.

Comprehensive risk-management framework

19. Section 19 requires that a recognized trade repository have a comprehensive risk-management framework. Set out below are some of our expectations for a recognized trade repository to be able to demonstrate that it meets that requirement.

Features of the framework

We would generally expect that a recognized trade repository would have a written risk-management framework (including policies, procedures and systems) that enables it to identify, measure, monitor, and manage effectively the range of risks that arise in, or are borne by, the recognized trade repository. A recognized trade repository's framework should include the identification and management of risks that could materially affect its ability to perform or to provide services as expected, such as interdependencies.

Establishing a framework

A recognized trade repository should have comprehensive internal processes to help its board of directors and senior management monitor and assess the adequacy and effectiveness of its risk-management policies, procedures, systems and controls. These processes should be fully documented and readily available to the recognized trade repository's personnel who are responsible for implementing them.

Maintaining a framework

We would generally expect that a recognized trade repository would regularly review the material risks it bears from, and poses to, other entities (such as other FMIs, settlement banks, liquidity providers or service providers) as a result of interdependencies, and develop appropriate risk-management tools to address these risks. These tools should include business continuity arrangements that allow for rapid recovery and resumption of critical operations and services in the event of operational disruptions and recovery or orderly wind-down plans should the trade repository become non-viable.

General business risk

20. (1) We consider general business risk to include any potential impairment of the recognized trade repository's financial position (as a business concern) as a consequence of a decline in its revenues or an increase in its expenses, such that expenses exceed revenues and result in a loss that must be charged against capital or an inadequacy of resources necessary to carry on business as a recognized trade repository.

(2) For the purpose of subsection 20(2), the amount of liquid net assets funded by equity that a recognized trade repository should hold is to be determined by its general business risk profile and the length of time required to achieve a recovery or orderly wind-down, as appropriate, of its critical operations and services, if such action is taken.

(3) A recognized trade repository should establish and maintain a plan for raising additional equity, in the event its equity falls close to or below the amount needed to fund the appropriate level of liquid net assets. This plan should be approved by the board of directors of the recognized trade repository and updated regularly.

(4) The scenarios identified under subsection 20(4) should take into account the various independent and related risks to which the recognized trade repository is exposed.

(5) Plans for the recovery or orderly wind-down of a recognized trade repository should contain, among other elements, a substantive summary of the key recovery or orderly wind-down strategies, the identification of the recognized trade repository's critical operations and services, and a description of the measures needed to implement the key strategies. The recognized trade repository should maintain the plan on an ongoing basis, to achieve recovery and orderly wind-down, and should hold sufficient liquid net assets funded by equity to implement this plan. A recognized trade repository should also take into consideration the operational, technological and legal requirements for participants to establish and move to an alternative arrangement in the event of an orderly wind-down.

System and other operational risks

21. (1) Subsection 21(1) sets out a general principle concerning the management of operational risk. In interpreting subsection 21(1), the following key considerations should be applied:

- a recognized trade repository should establish a robust operational risk-management framework with appropriate systems, policies, procedures, and controls to identify, monitor and manage operational risks;
- a recognized trade repository should review, audit and test systems, operational policies, procedures and controls, periodically and after any significant changes;
- a recognized trade repository should have clearly defined operational-reliability objectives and policies in place that are designed to achieve those objectives.

(2) The board of directors of a recognized trade repository should clearly define the roles and responsibilities for addressing operational risk.

(3) An adequate system of internal control over systems as well as adequate general information-technology controls are to be implemented to support information technology planning, acquisition, development and maintenance, computer operations, information systems support and security. There are Canadian frameworks that may provide guidance as to what constitutes adequate information technology controls, such as *COBIT* from ISACA. A recognized trade repository should ensure that its information-technology controls address the integrity of the data that it maintains, by protecting all derivatives data submitted from corruption, loss, improper disclosure, unauthorized access and other processing risks.

Paragraph 21(3)(b) requires a recognized trade repository to thoroughly assess future needs and make systems capacity and performance estimates in a method consistent with prudent business practice at least once a year. This paragraph also imposes an annual requirement for recognized trade repositories to conduct periodic capacity stress tests. Continual changes in technology, risk management requirements and competitive pressures will often result in these activities or tests being carried out more frequently.

Paragraph 21(3)(c) requires a recognized trade repository to notify the securities regulatory authority of any material systems failure. A failure, malfunction, delay or other disruptive incident would be considered “material” if the recognized trade repository would in the normal course of its operations escalate the incident to, or inform, its senior management that is responsible for technology, or if the incident would have an impact on participants. We also expect that, as part of this notification, the recognized trade repository will provide updates on the status of the failure, the resumption of service, and the results of its internal review of the failure.

Further, the recognized trade repository should have comprehensive and well-documented procedures in place to record, analyze and resolve all systems failures, malfunctions, delays and security incidents. In this regard, the recognized trade repository should undertake a *post mortem* review to identify the causes and any required improvement to normal operations and/or business continuity arrangements. Such reviews should, where relevant, include an analysis of the effects on the trade repository’s participants. The results of such internal reviews must be communicated to the regulator or securities regulatory authority as soon as practicable.

(4) We are generally of the view that disaster recovery plans should allow the recognized trade repository to provide continuous and undisrupted service, as back-up systems ideally should commence processing immediately. Where a disruption is unavoidable, a recognized trade repository is expected to provide prompt recovery of operations, meaning that it resumes operations within 2 hours following the disruptive event. Under paragraph 21(4)(c), an emergency event could include any external sources of operational risk, such as the failure of critical service providers or utilities or events affecting a wide metropolitan area, such as natural disasters, terrorism, and pandemics. Business continuity planning should encompass all policies and procedures to ensure uninterrupted provision of key services regardless of the cause of potential disruption.

(5) We expect that a recognized trade repository will engage relevant industry participants, as necessary, in tests of its business continuity plans, including testing of back-up facilities for both the recognized trade repository and its participants.

(6) For the purpose of subsection 21(6), a qualified party is a person or company or a group of persons or companies with relevant experience in both information technology and in the evaluation of related internal controls in a complex information technology environment, such as external auditors or third party information system consultants. We would generally consider that this obligation could be satisfied by an independent assessment by an internal audit department that is compliant with the *International Standards for the Professional Practice of Internal Auditing* published by the Institute of Internal Audit. Before engaging a qualified party, the recognized trade repository should notify each relevant securities regulatory authority.

(8) In determining what a reasonable period is to allow participants to make system modifications and test their modified systems, a recognized trade repository should consult with its participants and allow all participants a reasonable opportunity to develop, implement and test systems changes. We expect that the needs of all types of participants would be considered, including those of smaller and less sophisticated participants.

(9) In determining what a reasonable period is to allow participants to test their modified systems and interfaces with the recognized trade repository, we would generally expect a recognized trade repository to consult with its participants. We consider a reasonable period to be a period that would provide all participants a reasonable opportunity to develop, implement and test systems changes. We expect that the needs of all types of participants would be considered, including those of smaller and less sophisticated participants.

Data security and confidentiality

22. (1) Rules, policies and procedures to ensure the safety, privacy and confidentiality of derivatives data must include limitations on access to confidential data held by the trade repository, including derivatives data, and safeguards to protect against entities affiliated with a recognized trade repository from using trade repository data for their personal benefit or the benefit of others.

(2) The purpose of subsection 22(2) is to ensure that users of a recognized trade repository have some measure of control over their derivatives data.

Derivatives executed anonymously on a facility or platform for trading derivatives

22.1. The purpose of section 22.1 is to ensure that the identities of counterparties to a derivative that is executed anonymously on and subject to the rules of a facility for trading derivatives are not disclosed post-execution to users of the recognized trade repository. This only applies to a derivative in respect of which a counterparty does not know the identity of its counterparty prior to or at the time of execution of the derivative. Section 22.1 does not limit or apply to data provided or made available to the securities regulatory authority under this Instrument or pursuant to a recognized trade repository's recognition order.

Validation of data

22.2. (1) In accordance with subsection 22.2(1) and any other validation conditions set out in its recognition order, a recognized trade repository must validate that the derivatives data that it receives from a reporting counterparty satisfies the derivatives data elements listed in Appendix A to the Instrument. In addition, we expect a recognized trade repository to validate that the derivatives data it receives satisfies the technical specifications set out in the Multilateral Derivatives Data Technical Manual, which is included as Appendix A to this Policy.

(2) In evaluating what will be considered to be “technologically practicable” for purposes of subsection 22.2(2), we will take into account the prevalence, implementation and use of technology by comparable trade repositories. We may also conduct independent reviews to determine the state of technology.

Under securities legislation and subsection 18(2) of the Instrument, a recognized trade repository has an obligation to create and maintain records, including records of all the derivatives data reported that failed to satisfy the derivatives data validation procedures.

Verification of data accuracy

23. The policies and procedures required by this section must allow and enable the reporting counterparty to carry out its data verification obligations under paragraph 26.1(1)(b).

A recognized trade repository may satisfy its obligation under section 23 by providing the reporting counterparty, or its delegated third-party representative where applicable, a means of accessing derivatives data for open transactions involving the reporting counterparty that is maintained by the recognized trade repository as of the time of the reporting party's access to the derivatives data. Any access provided to a third-party representative is in addition to, not instead of, access provided to a relevant counterparty.

Outsourcing

24. Section 24 sets out requirements applicable to a recognized trade repository that outsources any of its material services or systems to a service provider. Generally, a recognized trade

repository must establish policies and procedures to evaluate and approve these outsourcing arrangements, including assessing the suitability of potential service providers and the ability of the recognized trade repository to continue to comply with securities legislation in the event of bankruptcy, insolvency or the termination of business of the service provider. A recognized trade repository is also required to monitor the ongoing performance of a service provider to which it outsources a key service, system or facility. The requirements under section 24 apply regardless of whether an outsourcing arrangement is with a third-party service provider or an affiliated entity of the recognized trade repository. A recognized trade repository that outsources any of its material services or systems remains responsible for those services or systems and for compliance with securities legislation.

Links and tiered participation arrangements

24.1.

Links

A recognized trade repository should carefully assess the risks, including the additional operational risks, related to its links to ensure the scalability and reliability of information technology and related resources. For example, a recognized trade repository may be part of a network linking various entities (such as clearing agencies, dealers, custodians and service providers) and could transmit or cause processing delays to such linked entities in the event of an operational disruption. Therefore, links should be designed such that each linked entity is able to observe the risk management and other principles in the PFMI Report.

Tiered participation arrangements

A recognized trade repository, when applicable, is expected to adequately oversee and manage the material risks associated with tiered participation arrangements. The rules, policies and procedures of the recognized trade repository should be designed to effectively identify indirect participants, the risks they create and the impact that processing the indirect participant's derivatives data has on the recognized trade repository and on the services it offers. The recognized trade repository is expected to regularly review risks associated with these arrangements in order to take appropriate action to address and manage these risks.

When applicable, the recognized trade repository should be able to identify and monitor the material dependencies that exist between the participant and the indirect participants in order to mitigate the material risks arising from these reporting arrangements. This includes identifying those indirect participants whose transaction volumes or values are large relative to the capacity of the participants through which they access their services.

PART 3 DATA REPORTING

Part 3 addresses the reporting obligations for a derivative that involves a local counterparty, including: the determination of which counterparty to the derivative is required to report derivatives data; when derivatives data is required to be reported; the types of derivatives data that

are required to be reported; and requirements regarding verification of data accuracy and reporting of errors and omissions.

Reporting counterparty

25. Section 25 sets out a process for determining which counterparty to a derivative is the reporting counterparty and is therefore required to fulfil the reporting obligations under the Instrument.

(1) The hierarchy outlined in subsection 25(1) for determining which counterparty to a derivative will be the reporting counterparty is intended to reflect the counterparty to the derivative that is best suited to fulfill the reporting obligation.

The hierarchy does not apply to original derivatives that are executed anonymously on a facility or platform for trading derivatives (and intended to be cleared). Under section 36.1, the facility or platform for trading derivatives has the obligations of a reporting counterparty in respect of these original derivatives. However, the hierarchy does apply to all other derivatives involving a local counterparty whether or not executed on a facility or platform for trading derivatives.

The definition of “derivatives dealer” in the Instrument does not require that a person or company be registered with the local securities regulatory authority in order to meet the definition. Accordingly, where the reporting counterparty to a derivative is a derivatives dealer, as defined in the Instrument, the reporting obligations with respect to the derivative apply irrespective of whether the derivatives dealer is a registrant in the local jurisdiction. See the guidance in section 1(2) of this Policy with respect to the factors to be considered to determine whether a person or company is a derivatives dealer for the purpose of the Instrument. A person or company that meets the definition of “derivatives dealer” in the local jurisdiction would be a derivatives dealer for the purpose of the Instrument, even if it is exempted or excluded from the requirement to register.

Cleared derivative

Under paragraph 25(1)(a), derivatives data relating to a cleared derivative is required to be reported by the reporting clearing agency. The reporting agency is required to report each cleared derivative resulting from a novation of the original derivative to the clearing agency as a separate, new derivative with reporting links to the original derivative, and is also required to report the termination of the original derivative under subsection 32(3). For clarity, the reporting clearing agency is not the reporting counterparty for the original derivative.

The following chart summarizes the reporting responsibilities in respect of derivatives that involve clearing:

Derivative	Reporting counterparty
Original derivative between Party A and Party B (sometimes referred to as the <i>alpha</i> transaction)	If executed anonymously on a facility or platform for trading derivatives, the facility or platform for trading derivatives (section 36.1). If not executed anonymously on a facility or platform for trading derivatives, the reporting counterparty as determined under section 25. For example, if Party A is a derivatives dealer and Party B is not, Party A would be the reporting counterparty.
Cleared derivative between Party A and the clearing agency (sometimes referred to as the <i>beta</i> transaction)	Clearing agency
Cleared derivative between Party B and the clearing agency (sometimes referred to as the <i>gamma</i> transaction)	Clearing agency
Termination of the original derivative between Party A and Party B	Clearing agency

Agreement between the counterparties

For a derivative between two derivatives dealers or two end-users that is not cleared (in other words, a derivative to which paragraphs 25(1)(a) and (b) do not apply), paragraph 25(1)(c) allows the counterparties to agree, in writing, at or before the time the transaction occurs, which counterparty will act as the reporting counterparty for the derivative. The intention of paragraph 25(1)(c) is to facilitate single counterparty reporting while requiring both counterparties to have procedures or contractual arrangements in place to ensure that reporting occurs.

One example of a type of agreement the counterparties may use to determine the reporting counterparty to a derivative is the ISDA methodology, publicly available at www.isda.org, developed for derivatives in Canada in order to facilitate one-sided derivative reporting and to provide a consistent method for determining the party required to act as reporting counterparty.

There is no requirement for counterparties to a derivative to use the ISDA methodology. However, in order for the counterparties to rely on paragraph 25(1)(c), the agreement must meet the conditions in paragraph 25(1)(c). Namely, the agreement must be in written form, have been entered into at or before the time of the derivative, and identify the reporting counterparty with respect to the derivative. The format of the written agreement is flexible. For example, an email between the counterparties is sufficient.

In the event that the counterparties are not able to agree, paragraph 25(1)(d) requires both counterparties to report the derivative to a recognized trade repository, in order to ensure timely reporting of derivatives data.

(2) and (3) Each local counterparty that relies on paragraph 25(1)(c) must fulfil the record-keeping obligations set out in subsections 25(2) and (3).

(4) Subsection (4) provides that a local counterparty that agrees to be the reporting counterparty for a derivative under paragraph 25(1)(c) must fulfil all reporting obligations as the reporting counterparty in relation to that derivative even if that local counterparty would otherwise be excluded from the trade reporting obligation under section 40.

Duty to report

26. Section 26 outlines the duty to report derivatives data. The requirements to report derivatives data do not apply to excluded contracts or instruments under MI 91-101 *Derivatives: Product Determination*.

A reporting counterparty may delegate its reporting obligations to a third party, including a third-party service provider. This includes reporting of initial creation data, lifecycle event data, valuation data, collateral and margin data, and position level data. Where reporting obligations are delegated to a third party, the reporting counterparty remains liable for any failure to comply with applicable requirements under the Instrument.

(2) We would generally expect that reports for derivatives that are not accepted for reporting by any recognized trade repository would be electronically submitted to the local securities regulatory authority, and market participants should contact the local securities regulatory authority in advance to make these reporting arrangements.

(3) Subsection 26(3) provides for limited substituted compliance in two circumstances.

The first circumstance is where a counterparty to a derivative is organized under the laws of the local jurisdiction but does not conduct business in the jurisdiction other than activities incidental to being organized in the jurisdiction.

We are of the view that factors that would indicate that a person or company is conducting business in the jurisdiction would include the following:

- having a physical location in a jurisdiction;
- having employees or agents that reside in the jurisdiction;
- generating revenue in the jurisdiction;
- having customers or clients in the jurisdiction.

We are also of the view that activities that are incidental to being organized under the law of a jurisdiction would include instructing legal counsel to file materials with the government agency responsible for registering corporations and maintaining a local agent for service of legal documents.

The second circumstance is where the derivative involves a local counterparty that is a local counterparty solely on the basis that it is an affiliated entity of a person or company, other than an individual, that is organized in the local jurisdiction or has its head office and principal place of business in the local jurisdiction, and that person or company is liable for all or substantially all of the liabilities of the affiliated entity.

In each of these two circumstances and provided that the additional conditions set out in paragraphs 26(3)(c) are satisfied, the counterparties can benefit from substituted compliance where the derivatives data has been reported to a recognized trade repository pursuant to the laws of a province or territory of Canada other than the local jurisdiction or of a foreign jurisdiction listed in Appendix B to the Instrument. The data relating to the derivative that is reported to a recognized trade repository under paragraph 26(3)(b) may be provided to the securities regulatory authority under paragraph (c) in the same form as required to be reported under the applicable derivatives reporting requirements listed in paragraph (b).

(4) Subsection 26(4) requires that all derivatives data reported for a given derivative be reported to the same recognized trade repository to which the initial report is submitted or, with respect to derivatives data reported under subsection 26(2), to the local securities regulatory authority.

The purpose of this requirement is to ensure the securities regulatory authority has access to all reported derivatives data for a particular derivative (from the initial report to the recognized trade repository through all lifecycle event reports to termination or expiration) from a single recognized trade repository. It is not intended to restrict counterparties' ability to report to multiple trade repositories nor to begin reporting derivatives data relating to a particular derivative to a different recognized trade repository. We expect that, if a reporting counterparty begins reporting derivatives data relating to a particular derivative in respect of which contractual obligations remain outstanding to a different recognized trade repository, all historical derivatives data relevant to the derivative must be additionally transferred and reported to the successor recognized trade repository. We expect that trade repositories would cooperate with reporting counterparties to facilitate the provision of data to the successor trade repository.

For a cleared derivative, the recognized trade repository to which the clearing agency must report all derivatives data is the recognized trade repository to which the original derivative was reported, unless the clearing agency obtains the consent of the local counterparties to the original derivative.

(9) The reporting counterparty to a derivative has not fulfilled its reporting obligations under Part 3 unless and until all relevant derivatives data satisfies the validation procedures of the recognized trade repository, which may include timing, methods of reporting, data standards in respect of the elements listed in Appendix A to the Instrument, and the technical specifications set out in the Multilateral Derivatives Data Technical Manual (which is included as Appendix A to this Policy).

A reporting counterparty will be notified by the trade repository pursuant to subsection 22.2(2) whether or not the reported derivatives data satisfies its validation procedures.

Verification of data accuracy, and reporting of errors and omissions

26.1. (1) The reporting counterparty in respect of a derivative is responsible for ensuring that reported derivatives data is accurate and contains no misrepresentation. To facilitate this, subsection 38(1) requires recognized trade repositories to provide counterparties with timely access to data. Paragraph 26.1(1)(a) applies to both open derivatives and derivatives that have expired or terminated (unless the record-keeping requirements under section 36 have expired as of the time that the error or omission is discovered).

A reporting counterparty that is a derivative dealer or a reporting clearing agency has the additional requirement under paragraph 26.1(1)(b) to verify the accuracy of the reported derivatives data at least every 30 days. This involves following the policies and procedures of the recognized trade repository (established pursuant to section 23) to compare all derivatives data for each open derivative for which it is the reporting counterparty with all derivatives data contained in the reporting counterparty's internal books and records to verify that there are no errors or omissions. Paragraph 26.1(1)(b) does not apply to derivatives that have expired or terminated.

(2) In evaluating what will be considered to be “technologically practicable” under subsection 26.1(2), the securities regulatory authority will take into account the prevalence, implementation and use of technology by comparable counterparties located in Canada and in comparable foreign jurisdictions. The securities regulatory authority may also conduct independent reviews to determine the state of technology. Subsection 26.1(2) applies to both open and expired or terminated derivatives, unless the record-keeping requirements under section 36 have expired as of the time that the error or omission is discovered.

(3) Under subsection 26.1(3), where a local counterparty that is not a reporting counterparty discovers an error or omission in respect of derivatives data that is reported to a recognized trade repository, such local counterparty has an obligation to report the error or omission to the reporting counterparty as soon as practicable upon discovery of the error or omission and in any case no later than the end of the business day following the day on which the error or omission is discovered. In evaluating what will be considered to be “technologically practicable” under subsection 26.1(2), the securities regulatory authority will take into account the prevalence, implementation and use of technology by comparable counterparties located in Canada and in comparable foreign jurisdictions. Once an error or omission is reported by the local counterparty to the reporting counterparty, the reporting counterparty then has an obligation under subsection 26.1(2) to report the error or omission to the recognized trade repository or to the securities regulatory authority.

(4) We consider a significant error or omission to include, but not be limited to, an error or omission impacting a substantial number of derivatives, or impacting a derivative that is significant in the context of the reporting counterparty's other derivatives. For example, a reporting counterparty must notify the securities regulatory authority where a counterparty is in default or where there has been another event giving rise to a right of termination of the derivative. In such

cases, the reporting counterparty should describe in its notification to the securities regulatory authority the general nature of the error or omission, the reason the error or omission is significant, the number of derivatives impacted, the date and duration of the error, the steps taken to remedy the error or omission, and any planned remediation steps. This requirement applies to both open and expired or terminated derivatives, unless the record-keeping requirements under section 36 have expired as of the time that the error or omission is discovered.

Legal entity identifiers

28. The Global LEI System is a G20 endorsed initiative⁶ for uniquely identifying parties to financial transactions, designed and implemented under the direction of the LEI ROC, a governance body endorsed by the G20. The Global LEI System serves as a public-good utility responsible for overseeing the issuance of legal entity identifiers globally to counterparties who enter into derivatives or that are involved in a derivatives transaction. LEIs can only be obtained from a Local Operating Unit (**LOU**) endorsed by the LEI ROC. The list of LEI ROC-endorsed LOUs and their contact information is available at <https://www.gleif.org/en/> or <https://www.leiroc.org>.

(1) We are of the view that reporting counterparties will take steps to ensure that the non-reporting counterparty provides its LEI to facilitate reporting under the Instrument. If the reporting counterparty cannot, for any reason, obtain the LEI from the non-reporting counterparty, publicly accessible resources may be available for obtaining that information.

(2) Paragraphs 28(2)(a) and (b) require each local counterparty (including both the reporting and non-reporting counterparty) to a derivative that is required to be reported under the Instrument, other than an individual, to acquire, maintain and renew an LEI. In other words, these requirements apply regardless of whether the local counterparty is the reporting counterparty.

Maintenance of an LEI for purposes of paragraph 28(2)(b) includes ensuring that the reference data associated with the LEI assigned to the counterparty is updated in a timely manner with all relevant and accurate information. Renewal of an LEI includes providing the relevant LOU with acknowledgement that the reference data associated with the LEI assigned to the counterparty is accurate.

The requirement in paragraph 28(2)(b) applies for such time as the counterparty has open derivatives. When all of the counterparty's derivatives that are required to be reported under the Instrument have expired or terminated, the counterparty is no longer required to maintain or renew its LEI until such time as it may enter into a new derivative. The Instrument does not require a reporting counterparty to verify that its counterparties to each derivative that it reports have maintained and renewed their LEIs, although the reporting counterparty must maintain and renew its own LEI.

⁶ For more information, see *FSB Report A Global Legal Entity Identifier for Financial Markets*, June 8, 2012, online:Financial Stability Board <<http://www.financialstabilityboard.org/publications/>>, and <https://www.fsb.org/2020/09/lei-roc-to-become-governance-body-for-otc-derivatives-identifiers/>.

(3) If the Global LEI System is not available at the time a reporting counterparty is required under the Instrument to report derivatives data, including the LEI for each counterparty, with respect to the derivative, a counterparty should use a substitute legal entity identifier. The substitute legal entity identifier should be set in accordance with the standards established by the LEI ROC for pre-LEIs identifiers. At the time the Global LEI System is operational, counterparties should cease using their substitute LEI and commence reporting their LEI. The substitute LEI and LEI might be identical.

If the counterparty to a derivative is an individual or is otherwise ineligible for an LEI, the alternate identifier used by the reporting counterparty must be unique for such counterparty, and the same alternate identifier must be used in respect of all derivatives involving that counterparty.

Unique transaction identifiers

29. A derivative, and a transaction relating to that derivative, must be identified by means of only one UTI from the perspective of all counterparties to the derivative or transaction. If more than one counterparty is the reporting counterparty for a derivative, both counterparties would identify the derivative and its related transaction by the same UTI. A reporting clearing agency should reference the UTI of the original derivative in its reports of the cleared derivatives.

Section 29 outlines the hierarchy for determining which person or company has the obligation to assign a UTI for a derivative that is required to be reported. In accordance with the February 2017 publication of *Guidance on the Harmonisation of the Unique Transaction Identifier* by CPMI-IOSCO, section 29 of this Instrument intends to achieve a globally harmonized outcome for the generation of UTI.

(1) Please see above under Part 1 for guidance regarding the definition of “derivatives dealer” and the factors in determining a business purpose. Please see above under section 22.1 for guidance regarding a “facility or platform for trading derivatives”.

Cleared derivative

Under paragraph 29(1)(a), where a derivative is cleared through a reporting clearing agency, the clearing agency must generate the UTI. For clarity, the clearing agency does not generate the UTI in respect of an original derivative that is intended to be cleared, to which it is not a counterparty.

Derivative executed on a facility or platform for trading derivatives

A reporting counterparty must not assign another UTI to a derivative that is executed on a facility or platform for trading derivatives, where that facility or platform has already assigned a UTI to the derivative. This is intended to ensure that a derivative is identified by means of only one UTI.

Earlier UTI generator

This requirement in the hierarchy reflects the intention that a derivative should be assigned the same UTI for the purposes of trade reporting under the laws of all jurisdictions.

Recognized trade repository

Where the reporting counterparty is neither a derivatives dealer nor a clearing agency (i.e. is an

end user), paragraph 29(1)(e) requires that the UTI be assigned by the recognized trade repository to which the derivative is reported.

(2) In evaluating what will be considered to be “technologically practicable” for purposes of subsection 29(2), we will take into account the prevalence, implementation and use of technology by comparable persons or companies located in Canada and in comparable foreign jurisdictions. We may also conduct independent reviews to determine the state of technology.

Unique product identifiers

30. Section 30 requires that a reporting counterparty identify each derivative that is subject to the reporting obligation under the Instrument by means of a unique UPI. The UPI must be obtained from The Derivatives Service Bureau Ltd. (DSB).

Creation data

31. (1) Subsection 31(1) requires that reporting of creation data be made immediately after a transaction occurs, which means that creation data should be reported as soon as technologically practicable after the execution of a transaction. In evaluating what will be considered to be “technologically practicable”, we will take into account the prevalence, implementation and use of technology by comparable counterparties located in Canada and in foreign jurisdictions. The participating jurisdictions may also conduct independent reviews to determine the state of reporting technology.

(2) Subsection 31(2) is intended to take into account the fact that not all counterparties will have the same technological capabilities. For example, counterparties that do not regularly engage in derivatives would, at least in the near term, likely not be as well situated to achieve real-time reporting. Further, for certain post-transaction operations that result in reportable derivatives, such as trade compressions involving numerous derivatives, immediate reporting may not currently be practicable. In all cases, the outside limit for reporting is the end of the business day following execution of the transaction.

Lifecycle event data

32. (1) When reporting a lifecycle event, there is no obligation to re-report derivatives data that has not changed, other than the UTI as required by subsection 27(2); only new data and changes to previously reported data need to be reported. Lifecycle event data is not required to be reported immediately but rather at the end of the business day on which the lifecycle event occurs. The end of business day report may include multiple lifecycle events that occurred on that day.

(2) In evaluating what will be considered to be “technologically practicable”, we will take into account the prevalence, implementation and use of technology by comparable counterparties located in Canada and in foreign jurisdictions. We may also conduct independent reviews to determine the state of technology.

(3) A clearing agency is required to report the termination of the original derivative in respect of a cleared derivative under subsection 32(3). The termination report must be made to the same

recognized trade repository to which the original derivative was reported by the end of the business day on which the original derivative is terminated.

Position level data

32.1. As an alternative to reporting lifecycle events, a reporting counterparty may, at its option, report aggregated position level data. This option is only available in respect of derivatives that meet the criteria under paragraphs 32.1(a) and (b). We view the term “fungible” in paragraph 32.1(b) to refer to derivatives involving identical contract specifications that are replaceable with one another or can be bought or sold to exactly offset a prior derivative having identical contract specifications. Contracts that exhibit these features are commonly referred to as “contracts for difference”. If a person or company is the reporting counterparty in respect of some derivatives that meet this criteria and others that do not, it may only report position level data in respect of the derivatives that meet this criteria, and must report lifecycle events under section 32 in respect of derivatives that do not. If a reporting counterparty chooses not to report position level data, it must instead report lifecycle events under section 32.

Valuation data and collateral and margin data

33. (1) The valuation data and collateral and margin data with respect to a derivative must be reported each business day until the derivative is terminated or expires. All reported derivatives data relating to a particular derivative must be reported to the same recognized trade repository according to subsection 26(4).

Records of data reported

36. A reporting counterparty is a market participant under securities legislation and, therefore, subject to the record-keeping requirements under securities legislation, in addition to the requirements in section 36 of the Instrument. The requirement to maintain records for 7 years after the expiration or termination of a derivative, rather than from the date the derivative was entered into, reflects the fact that derivatives create ongoing obligations, and information is subject to change throughout the life of a derivative.

As part of the record-keeping requirements under section 36, we expect a reporting counterparty will maintain records of each verification it performs to confirm the accuracy of reported derivatives data, as well as records relating to any errors or omissions discovered in reported derivatives data, or any corrections to such data.

Facility or platform for trading derivatives

36.1. Section 36.1 only applies to the original derivative. If a facility or platform for trading derivatives reports an original derivative under section 36.1, the reporting clearing agency is required to report the termination of the original derivative under subsection 32(3) and report the cleared derivatives under paragraph 25(1)(a). Section 36.1 only applies where it is not possible for a counterparty to establish the identity of the other counterparty prior to execution of a derivative.

PART 4 DATA DISSEMINATION AND ACCESS TO DATA

Data available to regulators

37. This section covers derivatives data necessary to carry out the securities regulatory authority's mandate to protect against unfair, improper or fraudulent practices, to foster fair and efficient capital markets, to promote confidence in the capital markets, and to contribute to the stability of the financial system and the reduction of systemic risk. This includes derivatives data with respect to any derivative that may impact capital markets in Canada.

Derivatives that reference an underlying asset or class of assets with a nexus to a jurisdiction in Canada can impact capital markets in Canada even if the counterparties to the derivative are not local counterparties. Therefore, the participating jurisdictions have a regulatory interest in derivatives involving such underlying interests even if such data is not submitted pursuant to the reporting obligations in the Instrument, but is held by a recognized trade repository.

(1) For the purpose of paragraph 37(1)(a), electronic access includes the ability of the securities regulatory authority to access, download, or receive a direct real-time feed of derivatives data maintained by the recognized trade repository.

For the purpose of paragraph 37(1)(d), in evaluating what will be considered to be “technologically practicable”, we will take into account the prevalence, implementation and use of technology by comparable trade repositories. We may also conduct independent reviews to determine the state of technology.

(2) It is expected that all recognized trade repositories will comply with the internationally accepted regulatory access standards and recommendations developed by CPMI (formerly CPSS) and IOSCO and contained in the CPSS-IOSCO final report entitled *Authorities' access to trade repository data*.⁷

(3) We interpret the requirement for a reporting counterparty to use best efforts to provide the securities regulatory authority with access to derivatives data to mean, at a minimum, instructing the recognized trade repository to release derivatives data to the securities regulatory authority.

Data available to counterparties

38. Section 38 is intended to ensure that each counterparty, and any person or company acting on behalf of a counterparty, has access to all derivatives data relating to its derivative(s) in a timely manner and that recognized trade repositories have appropriate authorization procedures in place to enable such access. The participating jurisdictions expect that where a counterparty has provided consent to a recognized trade repository to grant access to data to a delegate, including a third-party service provider, the recognized trade repository should grant such access on the terms consented to.

⁷ See report entitled *Authorities' access to trade repository data* available at <http://www.bis.org/publ/cpss110.htm>.

We note that reporting counterparties require access to derivatives data relating to their derivatives in order to fulfill their obligations under subsection 26(1) to ensure the accuracy of reported data.

We expect that data made available by a recognized trade repository to counterparties, and any person or company acting on their behalf, will not include the identity or LEI of the other counterparty in respect of derivatives executed anonymously on a facility or platform for trading derivatives and cleared through a reporting clearing agency, as required under section 22.1.

For purposes of subsection 38(3), we generally expect that the legal address and the headquarters address of a counterparty's LEI will align with a local counterparty's head office and principal place of business under paragraph (a) of the definition of "local counterparty, respectively. Reporting counterparties may rely on these existing LEI addresses to determine a non-reporting counterparty's jurisdiction, unless reliance on LEI data would be unreasonable given particular circumstances.

Data available to public

39. In evaluating what will be considered to be "technologically practicable" for purposes of paragraphs 39(1)(b) and 39(3)(b), we will take into account the prevalence, implementation and use of technology by comparable trade repositories. We may also conduct independent reviews to determine the state of technology.

(1) Subsection 39(1) requires a recognized trade repository to make available to the public at no cost certain aggregate data for all derivatives reported to it under the Instrument (including open positions, volume, number of transactions and price) unless otherwise governed by the requirements or conditions of a decision of a securities regulatory authority, including the terms of an applicable recognition order.

It is expected that a recognized trade repository will provide aggregate data by notional amounts outstanding and level of activity. Such aggregate data is expected to be available at no cost on the recognized trade repository's website.

(2) Subsection 39(2) requires that the aggregate data that is disclosed under subsection 39(1) be broken down into various categories of information. The following are examples of the categorized aggregate data required under subsection 39(2):

- currency of denomination (the currency in which the derivative is denominated);
- asset class of the underlier (e.g., fixed income, credit or equity);
- product type (e.g., options, forwards or swaps);
- cleared or uncleared;
- expiration (broken down into expiration ranges, such as less than one year, 1-2 years, 2-3 years).

(4) Published data must be anonymized and the names or legal entity identifiers of counterparties must not be published. This provision is not intended to create a requirement for a recognized trade repository to determine whether anonymized published data could reveal the identity of a counterparty based on the terms of the derivative.

PART 5 EXCLUSIONS

Commodity derivative

40. Section 40 provides an exclusion for a derivative the asset class of which is a commodity other than currency. This exclusion applies to physical commodity derivatives that are not excluded contracts and instruments under paragraph 2(d) of Multilateral Instrument 91-101 *Derivatives: Product Determination* for the purpose of the reporting obligation. An example of a physical commodity derivative that is required to be reported (and therefore could benefit from the exclusion under section 40) is a physical commodity contract that allows for cash settlement in place of delivery.

“Commodity” is defined in local securities legislation. We also consider certain intangible commodities, such as carbon credits and emission allowances, to be commodities. In contrast, this exclusion would not apply to financial commodities, such as currencies, interest rates, securities, indexes, as well as crypto assets that would be considered to be financial commodities.

A local counterparty with an aggregate month-end gross notional outstanding of less than \$250 000 000 would still be required to report a derivative involving an asset class other than a commodity (including a derivative involving currency), if it is the reporting counterparty for the derivative under subsection 25(1). The exclusion in section 40 does not apply to a person or company that is a clearing agency or a derivatives dealer, or an affiliated entity of a clearing agency or a derivatives dealer, even if the person or company is below the \$250 000 000 threshold.

For a derivative involving a local counterparty to which the exclusion under section 40 applies, the other counterparty will be the reporting counterparty for the derivative unless either

- the exclusion under section 40 also applies to that counterparty, or
- the local counterparty to which the exclusion under section 40 applies agrees under paragraph 25(1)(c) to be the reporting counterparty for the derivative. (Refer to subsection 25(4).)

In calculating the month-end notional outstanding for any month, the notional amount of all outstanding derivatives required to be reported under the Instrument and relating to a commodity other than cash or currency, with all counterparties other than affiliated entities, whether domestic or foreign, should be included. Contracts or instruments that are excluded from the definition of

“specified derivative” in Multilateral Instrument 91-101 *Derivatives: Product Determination* are not required to be included in the calculation of month-end notional outstanding.

For the purpose of this calculation, we would generally expect that a notional amount denominated in a foreign currency or referencing a quantity or volume of the underlying interest would be converted to a Canadian-dollar notional amount as at a time proximate to the time of the transaction in a reasonable and consistent manner, and consistent with applicable industry standards.

This exclusion is not relevant to an original derivative that is executed anonymously on a facility or platform for trading derivatives. In this situation, even if both local counterparties to the derivative would otherwise qualify for this exclusion, the facility or platform for trading derivatives must report the original derivative under section 36.1.

Derivative between affiliated entities

41.1. Section 41.1 provides an exclusion from the reporting requirement for derivatives between two affiliated entities. The exclusion is not available to a person or company that is a derivatives dealer or a clearing agency, or is an affiliated entity of a derivatives dealer or a clearing agency. For example, if an affiliated entity of a derivatives dealer enters into a derivative with its affiliated derivatives dealer, or with another affiliated entity of the derivatives dealer, the derivative must still be reported to a recognized trade repository. Also, the exclusion does not apply to a facility or platform for trading derivatives with respect to derivatives data for a derivative that is executed anonymously on such facility or platform and intended to be cleared.

APPENDICES TO

Multilateral Instrument 96-101 *Trade Repositories and Derivatives Data Reporting*

APPENDIX A

Appendix A to the Instrument should be read in conjunction with the Multilateral Derivatives Data Technical Manual, Appendix A to this Policy, which provides the formats and allowable values for the derivatives data specifications required to be reported by a reporting counterparty under Part 3 of the Instrument.

APPENDIX C

Item 1

1. Item 1 of Appendix C to the Instrument describes the types of derivatives for which a recognized trade repository must make the data in the fields described in Table 1 available to the public.

A recognized trade repository is not required to make available to the public data that relates to a lifecycle event that does not contain new price information compared to the derivatives data initially reported for the transaction.

Table 2

The identifiers listed in the column in Table 2 entitled *Underlying Asset Identifier* refer to the following:

“CAD-BA-CDOR” means all tenors of the Canadian Dollar Offered Rate (CDOR). CDOR is a financial benchmark for bankers’ acceptances with a term to maturity of one year or less currently calculated and administered by Refinitiv.

“USD-LIBOR-BBA” means all tenors of the U.S. Dollar ICE LIBOR. ICE LIBOR is a benchmark currently administered by ICE Benchmark Administration and provides an indication of the average rate at which a contributor bank can obtain unsecured funding in the London interbank market for a given period, in a given currency.

“EUR-EURIBOR-Reuters” means all tenors of the Euro Interbank Offered Rate (Euribor). Euribor is a reference rate published by the European Banking Authority based on the average interest rates at which selected European prime banks borrow funds from one another.

“GBP-LIBOR-BBA” means all tenors of the GBP Pound Sterling ICE LIBOR. ICE LIBOR is a benchmark currently administered by ICE Benchmark Administration and provides an indication of the average rate at which a contributor bank can obtain unsecured funding in the London interbank market for a given period, in a given currency.

“All Indexes” means any statistical measure of a group of assets that is administered by an organization that is not affiliated with the counterparties and whose value and calculation methodologies are publicly available.

Exclusions

2. Item 2 of Appendix C specifies certain types of derivatives that are excluded from the requirement under subsection 39(3) of the Instrument that transaction-level data be made available to the public. An example of a derivative excluded under item 2(a) is a cross-currency swap. The type of derivative excluded under item 2(b) results from portfolio compression activity which occurs whenever a derivative is amended or entered into in order to reduce the gross notional amount of an outstanding derivative or group of derivatives without impacting the net exposure. Item 2(c) excludes a derivative resulting from a novation on the part of a clearing agency when facilitating the clearing of a bilateral derivative. As a result of item 2(c), with respect to derivatives involving a recognized or exempt clearing agency, the timing under item 7 for making transaction-level data available to the public applies only to derivatives entered into by a clearing agency on its own behalf.

Rounding of notional amount

3. The rounding thresholds in Table 3 are to be applied to the notional amount of a derivative in the currency of the derivative. For example, the notional amount of a derivative denominated in United States dollars (USD) would be rounded and made available to the public in USD and not in the Canadian dollar (CAD) equivalent.

Capping of notional amount

4. Item 4 of Appendix C requires a recognized trade repository to compare the rounded notional amount of a derivative denominated in a non-CAD currency to the capped rounded notional amount in CAD that corresponds to the asset class and tenor of that derivative, each as set out in Table 4. Therefore, the recognized trade repository must convert the rounded notional amount in the non-CAD currency into CAD in order to determine whether it would exceed the capping threshold. The recognized trade repository must use a consistent and transparent methodology for converting to and from CAD for the purposes of comparing and publishing the capped notional amount.

For example, in order to compare the rounded notional amount of a derivative denominated in UK Pounds (GBP) to the thresholds in Table 4, the recognized trade repository must convert this amount to a CAD-equivalent amount. If the CAD-equivalent notional amount of the GBP denominated derivative exceeds the capping threshold, the recognized trade repository must make available to the public the capped rounded notional amount converted back into the currency of the derivative using a consistent and transparent methodology.

6. Item 6 of Appendix C requires a recognized trade repository to adjust the data in the Option premium field in a consistent and proportionate manner if the rounded notional amount of a derivative is greater than the applicable capped rounded notional amount, as set out in Table 4. The Option premium field adjustment should be proportionate to the size of the capped rounded notional amount compared to the rounded notional amount.

Timing

7. Item 7 of Appendix C sets out when a recognized trade repository must make the required information from Table 1 available to the public. The purpose of the public reporting delays is to ensure that counterparties have adequate time to enter into any offsetting derivative that may be necessary to hedge their positions. The time delay applies to all derivatives, regardless of size, that are subject to the requirement under subsection 39(3) of the Instrument that transaction-level data be made available to the public in accordance with Appendix C.

8. Item 8 of Appendix C allows for certain periods of downtime for a recognized trade repository to perform testing, maintenance and upgrades. The recognized trade repository must publicly disseminate the required information from Table 1 as soon as technologically practicable following the conclusion of the period of downtime. In evaluating what will be considered to be “technologically practicable”, we will take into account the prevalence, implementation and use of technology by comparable trade repositories. We may also conduct independent reviews to determine the state of technology.

We expect periods of downtime will be scheduled during times when the recognized trade repository receives the least amount of derivatives data. A recognized trade repository should provide prior notice to its participants and to the public of such downtime on its website, where possible. Only maintenance and upgrades that cannot otherwise be performed during routine downtime should be performed on an *ad hoc* basis. In such cases, the downtime should be during a time that would be least disruptive to the trade repository’s obligations under this Instrument.

**APPENDIX A
to
Policy**

Multilateral Derivatives Data Technical Manual

Draft Multilateral Derivatives Data Technical Manual

Draft administrative technical specifications for over-the-counter derivatives data reporting

April 11, 2022
Draft Version 1.0

1 Introduction

1.1 Background

The administrative technical specifications in this Draft Multilateral Derivatives Data Technical Manual (the **Draft Manual**) specify the definition, format, and allowable values for each data element that is required to be reported under proposed amendments to Multilateral Instrument 96-101 *Trade Repositories and Derivatives Data Reporting* (the **TR Rule**), and are sourced primarily from the *CPMI IOSCO Technical Guidance: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI)*⁸ (the **CDE Technical Guidance**). The Draft Manual is intended to assist market participants in providing informed comments to the proposed amendments to the TR Rule. We expect to finalize the Draft Manual concurrent to publication of the proposed amendments to the TR Rule.

All terms in the Draft Manual that are defined in the TR Rule have the same meaning as in the TR Rule (including terms defined in Appendix A to the TR Rules), unless otherwise provided in the Draft Manual or unless the context otherwise requires.

Where data elements align with the data elements prescribed by the Commodity Futures Trading Commission (the **CFTC**), we have generally adopted the name, definition, format, and allowable values as set out by the CFTC, except for terms that needed to be changed to be consistent with the TR Rule. Where additional guidance is necessary for reporting a data element under the TR Rule, we anticipate providing that guidance in a footnote once the Draft Manual is finalized.

Following final publication, we expect to update this manual on a periodic basis to reflect updates from both the Canadian Securities Administrators (**CSA**) and international regulators and working groups.

1.1.1 Format of technical specifications

- (1) **#:** all data elements are assigned a number for ease of reference. The data element number is referenced throughout the Draft Manual and in the appendices to the TR Rule.
- (2) **Source:** this column contains "CDE", "OSC" or "CFTC". "CDE" refers to a data element in the CDE Technical Guidance. "CFTC" refers to a data element sourced from the Commodity Futures Trading Commission (CFTC).
- (3) **Category:** data elements are grouped by topic or category.
- (4) **Definition for Data Element:** for CDE data elements, the definition is sourced from the CDE Technical Guidance, with footnotes added to provide clarity based on the CFTC's regulations. For "CFTC" data elements, the definition is sourced to the specific rules/regulations of the CFTC.

⁸ See Harmonisation of critical OTC derivative data elements (other than UTI and UPI) – Technical Guidance, April 2018,

<https://www.iosco.org/library/pubdocs/pdf/IOSCOPD598.pdf>

(5) **Format:** see Table below that illustrates the meaning of formats used throughout the manual.

Format	Content in brief	Additional Explanation	Example(s)
YYYY-MM-DD	Date	YYYY = four-digit year MM = two-digit month DD = two-digit day	2015-07-06 (corresponds to 6 July 2015)
YYYY-MM-DDThh:mm:ssZ	Date and time	YYYY, MM, DD as above hh = two-digit hour (00 through 23) (am/pm NOT allowed) mm = two-digit minute (00 through 59) ss = two-digit second (00 through 59) T is fixed and indicates the beginning of the time element. Z is fixed and indicates that times are expressed in UTC (Coordinated Universal Time) and not in local time.	2014-11-05T13:15:30Z (corresponds to 5 November 2014, 1:15:30 pm, Coordinated Universal time, or 5 November 2014, 8:15:30 am US Eastern Standard Time)
Num(25,5)	Up to 25 numerical characters including up to five decimal places	The length is not fixed but limited to 25 numerical characters including up to five numerical characters after the decimal point. Should the value have more than five digits after the decimal, reporting counterparties should round half-up.	1352.67 12345678901234567890.12345 1234567890123456789012345 12345678901234567890.12345 0 - 20000.25 - 0.257
Num(18,0)	Up to eighteen numerical characters, no decimals are allowed	The length is not fixed but limited to eighteen numerical characters.	1234567890 12345 20
Char(3)	Three alphanumeric characters	The length is fixed at three alphanumeric characters.	USD X1X 999
Varchar(25)	Up to 25 alphanumeric characters	The length is not fixed but limited at up to 25 alphanumeric characters. No special characters are permitted. If permitted, it would be explicitly stated in the format of the data element.	asgaGEH3268EFdsagTRCF543 aaaaaaaaa x
Boolean	Boolean characters	Either "True" or "False"	True False

Table 1 – Explanation of formats used in the Technical Specification

1.2 Explanation of Certain Data Elements or Categories

1.2.1 Direction of the transaction

We require the reporting of Buyer/Seller or Payer/Receiver for this data element. This is a slightly different approach from that taken in the CDE Technical Guidance, which provides two options for reporting Direction. The reporting counterparty should NOT report both Buyer/Seller and Payer/Receiver for a given transaction, but instead use the reporting method appropriate for the type of instrument reported.

1.2.2 Repeating data elements or leg-based products

Depending on the product being reported and the related market convention, a multi-leg or multi-stream product could be reported using a particular data element more than once.

1.2.3 Schedules

Derivatives involving schedules which specify the details known upfront are required to be reported as part of creation data.

1.2.4 Lifecycle events

Because data elements related to lifecycle events are not currently set out in the CDE Technical Guidance, but are required under the TR Rule, we are harmonizing with the CFTC specification until there is a CDE events category.

Section 4 illustrates how different lifecycle events should be reported in transaction reporting, position and end-of-day (valuation and collateral) reporting.

Position reporting is an optional method of lifecycle reporting for derivatives that have no fixed expiration date and are in a class of derivatives in which each derivative is fungible.

1.2.5 Validations

Validations are intended to be the same as the CFTC's specifications in Part 45 Swap Data Reporting Requirements, in cases where the CSA data element is also required by the CFTC.

Date Elements Related to Transactions

Number	Source	Data Element Name	Definition for Data Element	Format	Values	Public Disseminated	Position Reporting	Validations
12	CDE	Effective date	Unadjusted date at which obligations under the OTC derivative transaction come into effect, as included in the confirmation.	YYYY-MM-DD, based on UTC.	Any valid date based on ISO 8601 Date and time format.	Y	Effective date initially reported when position was entered into.	Transaction- M Collateral- NR Valuation- NR
13	CDE	Expiration date	Unadjusted date at which obligations under the derivative transaction stop being effective, as included in the confirmation. Early termination does not affect this data element.	YYYY-MM-DD, based on UTC.	Any valid date based on ISO 8601 Date and time format.	Y	N.A.	Transaction- M, when populated, the value shall be equal to or later than the value in [Effective date] Collateral- NR Valuation- NR
14	CDE	Execution timestamp	Date and time a transaction was originally executed, resulting in the generation of a new UTI. This data element remains unchanged throughout the life of the UTI.	YYYY-MM-DDThh:mm:ssZ, based on UTC. If the time element is not required in a particular jurisdiction, time may be dropped given that – in the case of representations with reduced accuracy – ISO 8601 allows the complete representation to be omitted, the omission starting from the extreme right-hand side (in the order from the least to the most significant).	Any valid date/time.	Y	Y	Transaction- M Collateral- NR Valuation- NR
15	CDE	Reporting timestamp	Date and time of the submission of the report to the trade repository.	YYYY-MM-DDThh:mm:ssZ, based on UTC.	Any valid date/time.	N	Y	Transaction- M, the value shall be equal to or later than the value in [Execution timestamp] Collateral- M

Number	Source	Data Element Name	Definition for Data Element	Format	Values	Public Disseminated	Position Reporting	Validations
								Valuation- M
16	CDE	Unique transaction identifier (UTI)	A unique identifier assigned to all derivatives reported at the transaction or position level which identifies it uniquely throughout its lifecycle and used for all recordkeeping	Varchar(52)	ISO 23897 Unique transaction identifier , up to 52 alphanumeric characters. New UTIs should be constructed solely from the upper-case alphabetic characters A–Z or the digits 0–9, inclusive in both cases.	N	Y – New UTI created for position	Transaction- C if [Unique swap identifier (USI)] is not populated, else {blank} Collateral- C if [Initial margin collateral portfolio code] = 'TRANSACTION-LEVEL' and [Unique swap identifier (USI)] is not populated, else {blank} Valuation- C if [Unique swap identifier (USI)] is not populated, else {blank}
17	CDE	Prior UTI (for one-to-one and one-to-many relations between transactions)	UTI assigned to the predecessor transaction that has given rise to the reported transaction due to a lifecycle event, in a one-to-one relation between transactions (e.g., in the case of a novation, when a transaction is terminated, and a new transaction is generated) or in a one-to-many relation between transactions (e.g., in clearing or if a transaction is split into several different transactions). This data element is not applicable when reporting many-to-one and many-to-many relations between transactions (e.g., in the case of a compression).	Varchar(52)	ISO 23897 Unique transaction identifier , up to 52 alphanumeric characters. New UTIs should be constructed solely from the upper-case alphabetic characters A–Z or the digits 0–9, inclusive in both cases.	N		Transaction- C if [Action type] = 'NEW' and ([Event type] = 'NOVAT' or 'CLRG' or 'EXER' or 'ALOC' or 'CLAL') and [Prior USI] (for one-to-one and one-to-many relations between transactions)] is not populated, else {blank} Collateral- NR Valuation- NR

Number	Source	Data Element Name	Definition for Data Element	Format	Values	Public Disseminated	Position Reporting	Validations
18	ESMA	Subsequent position UTI	The UTI of the position in which a derivative is included. This field is applicable only for the reports related to the termination of a derivative due to its inclusion in a position.	Up to 52 alphanumeric characters, only the upper-case alphabetic characters A-Z and the digits 0-9 are allowed	upper-case alphabetic characters A-Z and digits 0-9 allowed	N	Y	NR
19	CFTC	Prior USI (for one-to-one and one-to-many relations between transactions)	Unique swap identifier (USI) assigned to the predecessor transaction that has given rise to the reported transaction due to a cycle event, in a one-to-one relation between transactions (e.g., in the case of a novation, when a transaction is terminated, and a new transaction is generated) or in a one-to-many relation between transactions (e.g., in clearing or if a transaction is split into several different transactions). This data element is not applicable when reporting many-to-one and many-to-many relations between transactions (e.g., in the case of a compression).	Varchar(42)	Refer to: CFTC USI Data Standard Up to 42 alphanumeric characters	N	N	Transaction- C if [Action type] = 'NEWT' and ([Event type] = 'NOVAT' or 'CLRG' or 'EXER' or 'ALOC' or 'CLAL') and [Prior UTI (for one-to-one and one-to-many relations between transactions)] is not populated, else {blank} Collateral- NR Valuation- NR
20	CSA	Inter-affiliate	Indicate whether the transaction is between two affiliated entities	Boolean	<ul style="list-style-type: none"> •TRUE = contract entered into as an inter-affiliate transaction •FALSE = contract not entered into as an inter-affiliate transaction 	N	Y	NR
21	CFTC	Submitter identifier	Identifier of the entity submitting the derivatives data to the trade repository (TR), if reporting of the derivative has been delegated by the reporting counterparty to a third-party service provider, or if a trading facility is reporting the data.	Char(20)	LEI code that is included in the LEI data as published by the Global LEI Foundation (GLEIF, www.gleif.org/).	N	Y	Transaction- M Collateral- M Valuation- M

Number	Source	Data Element Name	Definition for Data Element	Format	Values	Public Disseminated	Position Reporting	Validations
22	CDE	Platform identifier	Identifier of the trading facility (e.g., exchange, multilateral trading facility, swap execution facility) on which the transaction was executed.	Char(4)	ISO 10383 segment MIC code. If no trading facility was involved in the transaction: • XOFF, for transactions in listed instruments • XXXX, for transactions in instruments that are not listed in any venue • BILT, if the reporting counterparty cannot determine whether the instrument is listed or not, as per jurisdictional requirements.	Y	Y	Transaction- C if [Cleared] = 'N' or 'I'; NR if [Cleared] = 'Y' Collateral- NR Valuation- NR
23	ESMA	Master agreement type	The type of master agreement, if used for the reported transaction.	Char(4)	<ul style="list-style-type: none"> • 'ISDA' - ISDA • 'CDEA' - FIA-ISDA Cleared Derivatives Execution Agreement • 'EUMA' - European Master Agreement • 'FPCA' - FOA Professional Client Agreement • 'FMAT' - FBF Master Agreement relating to transactions on forward financial instruments • 'DERV' - Deutscher Rahmenvertrag für Finanztermingeschäfte (DRV) • 'CMOP' - Contrato Marco de Operaciones Financieras • 'CHMA' - Swiss Master Agreement • 'IDMA' - Islamic Derivative Master Agreement • 'EFMA' - EFET Master Agreement • 'GMRA' - GMRA • 'GMSL' - GMSLA • 'BIAG' - bilateral agreement • Or 'OTHR' if the master agreement type is not included in the above list 	N	Y	NR

YYYY-MM-DD	Any valid date based on ISO 8601 Date and time format.	N	N	Transaction – CR/IR/EQ/CO O Transaction - FX C if (UPI.[Instrument type] = 'Forward' or 'Option') and UPI.[Delivery type] = 'Cash', else {blank} Collateral - NR Valuation - NR

3 Appendix

From CPMI IOSCO Technical Guidance: Harmonisation of critical OTC derivatives data elements (other than UTI and UPI)

3.1 Notional amount

Product	Converted Amount
Equity options and similar products	Product of the strike price and the number of shares or index units
Equity forwards and similar products	Product of the forward price and the number of shares or index units
Equity dividend swaps and similar products	Product of the period fixed strike and the number of shares or index units
Equity swaps, portfolio swaps, and similar products	Product of the initial price and the number of shares or index units
Equity variance swaps and similar products	Variance amount
Equity volatility swaps and similar products	Vega notional amount
Equity CFDs and similar products	Product of the initial price and the number of shares or index units
Commodity options and similar products	Product of the strike price, and the total notional quantity
Commodity forwards and similar products	Product of the forward price and the total notional quantity
Commodity fixed/float swaps and similar products	Product of the fixed price and the total notional quantity
Commodity basis swaps and similar products	Product of the last available spot price at the time of the transaction of the underlying asset of the leg with no spread and the total notional quantity of the leg with no spread
Commodity swaptions and similar products	Notional amount of the underlying contract
Commodity CFDs and similar products	Product of the initial price and the total notional quantity

3.2 Mapping of Day count convention allowable values to ISO 20022, FpML, and FIX/FIXML values

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A001	IC30360ISDAor30360AmericanBasicRule	Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February, and provided that the interest period started on a 30th or a 31st. This means that a 31st is assumed to be a 30th if the period started on a 30th or a 31st and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). This is the most commonly used 30/360 method for US straight and convertible bonds.	1	30/360 (30U/360 Bond Basis)	Mainly used in the United States with the following date adjustment rules: (1) If the investment is End-Of-Month and Date1 is the last day of February and Date2 is the last day of February, then change Date2 to 30; (2) If the investment is End-Of-Month and Date1 is the last day of February, then change Date1 to 30; (3) If Date2 is 31 and Date1 is 30 or 31, then change Date2 to 30; (4) If Date1 is 31, then change Date1 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (f). [Symbolic name: ThirtyThreeSixtyUS]	30/360	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (f) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (e). The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360, calculated on a formula basis as follows: $\text{Day Count Fraction} = \frac{[360 * (Y2 - Y1) + 30 * (M2 - M1) + (D2 - D1)]}{360}$ "D1" is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D1, will be 30; and "D2" is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31 and D1 is greater than 29, in which case D2 will be 30 ¹³

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A002	IC30365	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and a 365-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that a 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th).					
A003	IC30Actual	Method whereby interest is calculated based on a 30-day month in a way similar to the 30/360 (basic rule) and the assumed number of days in a year in a way similar to the Actual/Actual (ICMA). Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month, except for February. This means that the 31st is assumed to be the 30th and 28 Feb (or 29 Feb for a leap year) is assumed to be the 28th (or 29th). The assumed number of days in a year is computed as the actual number of days in the coupon period multiplied by the number of interest payments in the year.					

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A004	Actual360	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 360-day year.	6	Act/360	The actual number of days between Date1 and Date2, divided by 360. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (e). [Symbolic name: ActThreeSixty]	ACT/360	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (e) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (d). The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360.
A005	Actual365Fixed	Method whereby interest is calculated based on the actual number of accrued days in the interest period and a 365-day year.	7	Act/365 (FIXED)	The actual number of days between Date1 and Date2, divided by 365. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (d). [Symbolic name: ActThreeSixtyFiveFixed]	ACT/365.FIXED	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (d) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (c). The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365.

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A006	ActualActualICMA	Method whereby interest is calculated based on the actual number of accrued days and the assumed number of days in a year, i.e., the actual number of days in the coupon period multiplied by the number of interest payments in the year. If the coupon period is irregular (first or last coupon), it is extended or split into quasi-interest periods that have the length of a regular coupon period and the computation is operated separately on each quasi-interest period and the intermediate results are summed up.	9	Act/Act (ICMA)	The denominator is the actual number of days in the coupon period multiplied by the number of coupon periods in the year. Assumes that regular coupons always fall on the same day of the month where possible. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (c). [Symbolic name: ActActICMA]	ACT/ACT.ICMA	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (c). This day count fraction code is applicable for transactions booked under the 2006 ISDA Definitions. Transactions under the 2000 ISDA Definitions should use the ACT/ACT.ISMA code instead. A fraction equal to "number of days accrued/number of days in year", as such terms are used in Rule 251 of the statutes, by-laws, rules and recommendations of the International Capital Markets Association (the "ICMA Rule Book"), calculated in accordance with Rule 251 of the ICMA Rule Book as applied to non-US dollar-denominated straight and convertible bonds issued after 31 December 1998, as though the interest coupon on a bond were being calculated for a coupon period corresponding to the Calculation Period or Compounding Period in respect of which payment is being made.

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A007	IC30E360orEuroBondBasismodell	<p>Method whereby interest is calculated based on a 30-day month and a 360-day year. Accrued interest to a value date on the last day of a month shall be the same as to the 30th calendar day of the same month. This means that the 31st is assumed to be the 30th and the 28 Feb (or 29 Feb for a leap year) is assumed to be equivalent to 30 Feb. However, if the last day of the maturity coupon period is the last day of February, it will not be assumed to be the 30th. It is a variation of the 30/360 (ICMA) method commonly used for eurobonds. The usage of this variation is only relevant when the coupon periods are scheduled to end on the last day of the month.</p>	5	30E/360 (ISDA)	<p>Date adjustment rules are: (1) if Date1 is the last day of the month, then change Date1 to 30; (2) if D2 is the last day of the month (unless Date2 is the maturity date and Date2 is in February), then change Date2 to 30. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h). [Symbolic name: ThirtyEThreeSixtyISDA]</p>	30E/360.ISDA	<p>Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (h). Note the algorithm for this day count fraction under the 2006 ISDA Definitions is designed to yield the same results in practice as the version of the 30E/360 day count fraction defined in the 2000 ISDA Definitions. See Introduction to the 2006 ISDA Definitions for further information relating to this change. The number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 360, calculated on a formula basis as follows: $\text{Day Count Fraction} = \frac{[360*(Y2-Y1) + 30*(M2-M1) + (D2-D1)]}{360}$. "D1" is the first calendar day, expressed as a number, of the Calculation Period or Compounding Period, unless such number would be 31, in which case D1, will be 30; "D2" is the calendar day, expressed as a number, immediately following the last day included in the Calculation Period or Compounding Period, unless such number would be 31, in which case D2 will be 30.</p>

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A008	ActualActualISDA	Method whereby interest is calculated based on the actual number of accrued days of the interest period that fall (falling on a normal year, year) divided by 365, added to the actual number of days of the interest period that fall (falling on a leap year, year) divided by 366.	11	Act/Act (ISDA)	The denominator varies depending on whether a portion of the relevant calculation period falls within a leap year. For the portion of the calculation period falling in a leap year, the denominator is 366 and for the portion falling outside a leap year, the denominator is 365. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (b). [Symbolic name: ActActISDA]	ACT/ACT.ISDA	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (b) or Annex to the 2000 ISDA Definitions (June 2000 Version), Section 4.16. Day Count Fraction, paragraph (b). Note that going from FpML 2.0 Recommendation to the FpML 3.0 Trial Recommendation the code in FpML 2.0 "ACT/365.ISDA" became "ACT/ACT.ISDA". The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if any portion of that Calculation Period or Compounding Period falls in a leap year, the sum of (i) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a leap year divided by 366 and (ii) the actual number of days in that portion of the Calculation Period or Compounding Period falling in a non-leap year divided by 365).

Allowable value	ISO 20022 name	ISO 20022 definition ¹⁰	FIX/FIXML ¹¹ code value	FIX/FIXML code value description	FIX/FIXML definition	FpML ¹² code	FpML definition
A009	Actual365LorActuActubasisRule	Method whereby interest is calculated based on the actual number of accrued days and a 365-day year (if the coupon payment date is NOT in a leap year) or a 366-day year (if the coupon payment date is in a leap year).	14	Act/365L	The number of days in a period equal to the actual number of days .The number of days in a year is 365, or if the period ends in a leap year 366. Used for sterling floating rate notes. May also be referred to as ISMA Year. See also 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (i). [Symbolic name: ActThreeSixtyFiveL]	ACT/365L	Per 2006 ISDA Definitions, Section 4.16. Day Count Fraction, paragraph (i). The actual number of days in the Calculation Period or Compounding Period in respect of which payment is being made divided by 365 (or, if the later Period End Date of the Calculation Period or Compounding Period falls in a leap year, divided by 366).
A010	ActualActualAFB	Method whereby interest is calculated based on the actual number of accrued days and a 366-day year (if 29 Feb falls in the coupon period) or a 365-day year (if 29 Feb does not fall in the coupon period). If a coupon period is longer than one year, it is split by repetitively separating full year subperiods counting backwards from the end of the coupon period (a year backwards from 28 Feb being 29 Feb, if it exists). The first of the subperiods starts on the start date of the accrued interest period and thus is possibly shorter than a year. Then the interest computation is operated separately on each subperiod and the intermediate results are summed up.	8	Act/Act (AFB)	The actual number of days between Date1 and Date2, the denominator is either 365 (if the calculation period does not contain 29 February) or 366 (if the calculation period includes 29 February). See also AFB Master Agreement for Financial Transactions - Interest Rate Transactions (2004) in Section 4. Calculation of Fixed Amounts and Floating Amounts, paragraph 7 Day Count Fraction, subparagraph (i). [Symbolic name: ActActAFB]	ACT/ACT.AFB	The Fixed/Floating Amount will be calculated in accordance with the "BASE EXACT/EXACT" day count fraction, as defined in the "Définitions Communes plusieurs Additifs Techniques" published by the Association Française des Banques in September 1994. The denominator is either 365 (if the calculation period does not contain 29 February) or 366 (if the calculation period includes 29 February) – where a period of longer than one year is involved, two or more calculations are made: interest is calculated for each full year, counting backwards from the end of the calculation period, and the remaining initial stub period is treated in accordance with the usual rule. When counting backwards for this purpose, if the last day of the relevant period is 28 February, the full year should be counted back to the previous 28 February unless 29 February exists, in which case, 29 February should be used.

3.3 Valuation method

Classification of valuation inputs

Bucket	Input used	Valuation method ¹⁴
1	<p>Quoted prices in active markets for identical assets or liabilities that the entity can access at the measurement date [IFRS 13:76/ASC 820-10-35-40]. A quoted market price in an active market provides the most reliable evidence of fair value and is used without adjustment to measure fair value whenever available, with limited exceptions. [IFRS 13:77/ASC 820-10-35-41]</p> <p>An active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis. [IFRS 13: Appendix A/ASC 820-10-20].</p>	Mark-to-market
2	Quoted prices for similar assets or liabilities in active markets [IFRS 13:81/ASC 820-10-35-47] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly)	Mark-to-market
3	Quoted prices for identical or similar assets or liabilities in markets that are not active [IFRS 13:81/ASC 820-10-35-48(b)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly).	Mark-to-model – historic prices from inactive markets should not be directly used
4	Inputs other than quoted prices that are observable for the asset or liability, for example interest rates and yield curves observable at commonly quoted intervals, implied volatilities, credit spreads [IFRS 13:81/ASC 820-10-35-48(c)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly)	Mark-to-market
5	Inputs that are derived principally from or corroborated by observable market data by correlation or other means (“market-corroborated inputs”) [IFRS 13:81/ASC 820-10-35-48(d)] (other than quoted market prices included within bucket 1 that are observable for the asset or liability, either directly or indirectly).	Mark-to-model – the inputs can be derived “principally” from observable market data, meaning that unobservable inputs can be used
6	Unobservable inputs for the asset or liability. [IFRS 13:86/ASC 820-10-35-52] Unobservable inputs are used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. An entity develops unobservable inputs using the best information available in the circumstances, which might include the entity’s own data, taking into account all information about market participant assumptions that is reasonably available. [IFRS 13:87-89/ASC 820-10-35-53 - 35-54A]	Mark-to-model – unobservable inputs are used

¹⁴ The classification provided in this column is independent from IFRS 13/ASC 820 and is for the sole purpose of reporting critical data elements of OTC derivative transactions.
#6017893 v1

3.4 Collateralisation category

Value	Name	Definition
UNCO	Uncollateralised	There is no collateral agreement between the counterparties or the collateral agreement(s) between the counterparties stipulates that no collateral (neither initial margin nor variation margin) has to be posted with respect to the derivative transaction.
PAC1	Partially collateralised: Counterparty 1 only	The collateral agreement(s) between the counterparties stipulates that the reporting counterparty regularly posts only variation margin and that the other counterparty does not post any margin with respect to the derivative transaction.
PAC2	Partially collateralised: Counterparty 2 only	The collateral agreement(s) between the counterparties stipulates that the other counterparty regularly posts only variation margin and that the reporting counterparty does not post any margin with respect to the derivative transaction.
PACO	Partially collateralised	The collateral agreement(s) between the counterparties stipulates that both counterparties regularly post only variation margin with respect to the derivative transaction.
OWC1	One-way collateralised: Counterparty 1 only	The collateral agreement(s) between the counterparties stipulates that the reporting counterparty posts the initial margin and regularly posts variation margin and that the other counterparty does not post any margin with respect to the derivative transaction.
OWC2	One-way collateralised: Counterparty 2 only	The collateral agreement(s) between the counterparties stipulates that the other counterparty posts the initial margin and regularly posts variation margin and that the reporting counterparty does not post any margin with respect to the derivative transaction.
O1PC	One-way/partially collateralised: Counterparty 1	The collateral agreement(s) between the counterparties stipulates that the reporting counterparty posts the initial margin and regularly posts variation margin and that the other counterparty regularly posts only variation margin.
O2PC	One-way/partially collateralised: Counterparty 2	The collateral agreement(s) between the counterparties stipulates that the other counterparty posts the initial margin and regularly posts variation margin and that the reporting counterparty regularly posts only variation margin.
FULL	Fully collateralised	The collateral agreement(s) between the counterparties stipulates that both counterparties post initial margin and regularly post variation margin with respect to the derivative transaction.

3.5 Lifecycle event reporting

Event Type

Action Type	Action type & Event type combinations	Trade (TRDE)	Novation (NOVT)	Compression or Risk Reduction Exercise (COMP)	Early Termination (EART)	Clearing (CLRG)	Exercise (EXER)	Allocation (ALOC)	Clearing & Allocation (CLAL)	Credit Event (CRDT)	Transfer (PORT)	Inclusion In Position
		Modify (MODI)	✓	✓	✓			✓	✓		✓	
	Correct (CORR)											
	Terminate (TERM)		✓	✓	✓	✓	✓	✓	✓			✓
	Error (EROR)											
	Revive (REVI)											
	Transfer out (PRTO)										✓	
	Valuation (VALU)											
	Collateral (COLU)											
	Position component
